

StatusNeo

THE AUTHENTIC AI™ COMPANY

KAI already holds the data. These three domains show where it isn't yet at work.

01 ASSET LIFECYCLE MANAGEMENT

Asset profile - one authoritative, structured profile per asset

Asset onboarding - standardise intake so data is usable from day one

Diligence retention - carry diligence knowledge beyond the deal

02 PORTFOLIO MANAGEMENT

Follow-on decisions - supported by connected, current views

Construction signals - fund-level signals surfaced as they form

03 LP & REGULATORY REPORTING

LP reporting - a governed, repeatable production model

LP queries - faster, self-serve responses

Regulatory reporting - auditable and re-runnable each cycle

WE INTEND TO BEGIN HERE

LP & Regulatory Reporting

→ Most contained scope

→ Clearest starting point

→ Fastest to demonstrate value

The data already lives on KAI. Our work is the model around it.

EXECUTIVE TAKEAWAY

Same data, three domains – we start where it proves value fastest: LP & Regulatory Reporting.

The Team Structure StatusNeo proposes to Keppel

DECISION FABRIC

Functional Consulting

1 Functional Consultant / Product Manager

- Workflow discovery & process intelligence
- Business rules design & capability prioritisation
- **Define what KAI should do** from the BRD perspective in each domain

AUTHENTIC AI

Data & AI Practice

1 Data Engineer / Data Architect

- **Prepare the data for AI capabilities inside KAI**
- Governed, explainable, production-ready
- Integrated with enterprise data & rules for full traceability

EMBEDDED FDE

Inside Keppel TMS

1 FDE embedded in Keppel TMS

- Build and ship inside the live TMS environment
- Turn edge cases into shipped fixes, in real time
- **AI Engineer on-site**

Keppel TMS owns strategy and platform leadership.

StatusNeo extends the execution capacity.

Together: enterprise capability delivery.

The Scaling Roadmap

PILOT

LP & Regulatory Reporting

Weeks 1–10

WHAT WE INDUSTRIALISE

- Governed data-to-report pipeline on KAI
- Reusable LP query patterns
- Auditable, repeatable regulatory model

MEASURED BY

Report cycle time · query turnaround · manual effort

EXPAND

Asset 360

Weeks 8–20

WHAT WE INDUSTRIALISE

- One structured asset profile as a data product
- Diligence knowledge captured into it
- Standardised onboarding on KAI

MEASURED BY

Data completeness · onboarding cycle · profile adoption

GOVERN

Portfolio Intelligence

Months 5–9

WHAT WE INDUSTRIALISE

- Connected, live portfolio views
- Fund-level construction signals as a service

MEASURED BY

Analyst effort · signal latency · decision coverage

SCALE

Enterprise Operating Model on KAI

WHAT WE INDUSTRIALISE

- Three domains run as governed, reusable capabilities
- The squad shifts from building to operating
- Keppel TMS becomes the AI delivery organisation for the Temasek ecosystem

StatusNeo

HELPING KEPPEL INDUSTRIALISE & EXECUTE ITS ENTERPRISE AT SCALE

KAI is already built. The data is already there. The work ahead is expansion around it. The intelligence inside KAI needs to be wired into the decisions where it matters.

StatusNeo closes that distance. We propose one squad, one starting domain. Early, measurable proof - then a model that compounds, because every capability we industrialise becomes reusable across the Temasek ecosystem.

We would like to hold an executive workshop to **align the point of view and secure the roadmap of execution at scale.**
