The Economics of Asset
Management is Changing
MARKET MOVEMENT

The Economics of Asset Management Now Favor Enterprise Alpha

GLOBAL ALTERNATIVES AUM • US\$ TRILLION

Actual to 2024, projected to 2030

THE MARKET IS SHIFTING

Capital deployment is rising faster than the operating models built to maintain & scale them.

~\$30T

Private markets AUM • 2030

~\$3T

Infrastructure AUM • 2030

6–7 yr

Avg asset holding period

MORE ASSETS. MORE OPERATIONS. MORE DECISIONS.

- ➔ More assets to operate, across longer holding period
- ➔ More operational decisions per dollar deployed
- ➔ Alpha accrues to operators, not just allocators.

EXECUTIVE TAKEAWAY

Tomorrow's leaders will generate enterprise alpha from industrialization of operations, not relying on investments alone.

Four structural forces now make asset operations the decisive driver of returns, shifting focus from deployment-led approach and triggering a chain on downstream reaction

EXECUTIVE TAKEAWAY

Every force points the same way. As entry multiples and leverage stop paying, the scarce advantage becomes operational - the ability to make and execute better decisions across the portfolio.

StatusNeo

What do market changes
mean for Keppel

**KEY STRATEGIC
IMPERATIVES**

Investment deploys capital; operations compound 65% of enterprise value

VALUE REALIZATION ACROSS THE VALUE CHAIN

Directional - based on Bain / McKinsey value-creation attribution

● Investment phase · deploys capital ● Operating years · creates enterprise alpha

KEY TAKEAWAYS

- Value realization stays flat through the investment phase, then surges across the operating years
- 65% of enterprise value now comes from operational & EBITDA improvement - realized after entry
- Multiple expansion (22%) and leverage (13%) are front-loaded and shrinking as rates stay high
- Asset operations and portfolio monitoring are where alpha is won or lost

VALUE SOURCES IN AM, DECOMPOSED

65%

Operational & EBITDA

22%

Multiple expansion

13%

Leverage

EXECUTIVE TAKEAWAY

Investment decisions deploy capital; operational decisions create enterprise alpha

Source: Bain Global Private Equity Report; McKinsey · STRICTLY CONFIDENTIAL

The highest-value capabilities cluster in the operating years - where no incumbent AI tool competes

VALUE LEVERAGE VS. VALUE-CHAIN POSITION

Bubble size ≈ enterprise-data readiness

VALUE MAP DECOMPOSED

- Operating-side capabilities**
Asset operations, portfolio and investor intelligence run on rich existing enterprise data - highest leverage, clearest ROI
- Investment-side diligence**
High value but data-sensitive and model-risk heavy - sequence it after the platform is proven
- Foundational capabilities**
Deal origination and knowledge intelligence enable the rest and compound more slowly

THE OPERATING WINDOW

The highest-value capabilities sit in the operating years - rich data, clear ROI, and no incumbent AI tool owns them cleanly.

EXECUTIVE TAKEAWAY Concentrate first where operational alpha lives - the operating years, on data you already own

StatusNeo

Platform Industrialization &
Execution at Scale

**STRATEGIC PARTNERSHIP
OPPORTUNITIES**

StatusNeo is envisioning to evolve KAI Workflows into industrialized enterprise capabilities, enabling execution at scale

FROM WORKFLOW OPPORTUNITY TO RECOMMENDED PATH

PROPOSED SOLUTION – EXECUTIVE TAKEAWAY

StatusNeo helps Keppel transform business workflows into industrialized enterprise capabilities by combining Decision Fabric with enterprise engineering - accelerating execution and value realization on KAI.

PERCEIVED GAP PER DOMAIN

ASSET LIFECYCLE MANAGEMENT

- **Problem 1:** There is no single authoritative “golden” profile per asset - and every downstream decision reflects on this mismatch.
- **Problem 2:** Asset onboarding into the platform takes weeks when the economics of the deal have already been decided.
- **Problem 3:** Due diligence knowledge doesn't survive the investment decision.

PORTFOLIO MANAGEMENT

- **Problem 4:** Follow-on investment decisions are made on fragmented, manually assembled views.
- **Problem 5:** Fund-level portfolio construction signals don't exist in real time.

LP & REGULATORY REPORTING CYCLE

- **Problem 6:** LP report production is a 3-week manual assembly exercise every quarter.
- **Problem 7:** LP queries require manual data pulls with multi-day response cycles.
- **Problem 8:** Regulatory and AIFMD-equivalent reporting is manual and re-run every cycle.

Keppel TMS scales from platform owner to enterprise AI delivery organization

01 OUR OBSERVATION

Keppel TMS has built a strong enterprise AI foundation through KAI, with the ambition to become the technology and AI execution partner across the Temasek ecosystem.

This means that challenge is no longer building the platform - it's continuously delivering enterprise capabilities at scale.

02 WHERE STATUSNEO CONTRIBUTES

Business Consulting Capabilities

- Discover workflow opportunities
- Map decision flows
- Design business rules
- Prioritize capabilities
- Realize measurable value

Engineering Capabilities

- Build AI products
- Engineer capabilities
- Integrate existing platforms
- Industrialize solutions
- Managed engineering capacity, globally

03 PARTNERSHIP MODEL

A scalable extension of Keppel TMS - not a replacement

Keppel TMS	Platform & Client Leadership
StatusNeo	Business & Engineering Capacity
Together	Enterprise Capability Delivery

EXECUTION CAPACITY EXTENDED THROUGH

Business SMEs	AI Engineers	Product Engineers
Platform Engineers	UX/UI Designers	Solution Architects
Managed Services		

Keppel TMS owns the strategy. We expand your execution capacity across functions and AI Engineering

04 WHAT THIS PARTNERSHIP ENABLES

- Enterprise AI capabilities across multiple industries
- Faster client delivery
- Repeatable implementation playbooks
- Global engineering capacity
- Industrialized AI programs
- Scalable delivery across the Temasek ecosystem

EXECUTIVE TAKEAWAY

Keppel TMS provides the platform and strategic direction; StatusNeo extends the business and engineering capacity to continuously deliver enterprise capabilities across the Temasek ecosystem

StatusNeo

A Joint Operating Model
**DELIVERING ENTERPRISE
ALPHA FOR KEPPEL**

Not four service boxes - one connected practice, consulted and engineered as one from strategy to code

EXECUTIVE TAKEAWAY

StatusNeo combines business consulting and engineering to continuously transform enterprise decisions into industrialized capabilities on KAI.

A four-phase discovery partnership turns KAI into enterprise alpha

Phase 01

Executive Alignment

- ➔ Build shared understanding of the strategic opportunity

Exec workshop • POV refinement • success criteria

Output - shared transformation vision

Phase 03

Capability Design & Pilot

- ➔ Validate one or two flagship enterprise capabilities

Workflow design • KAI integration • pilot implementation

Output - production-ready pilot, measured outcomes

Phase 02

Discovery & Opportunity Assessment

- ➔ Identify the highest-value opportunities on KAI

Workflow discovery • SME interviews • opportunity prioritization

Output - prioritized capability portfolio & roadmap

Phase 04

Scale & Industrialize

- ➔ Expand validated capabilities across the enterprise

Industrialization • AIOps/LLMOps • governance • reuse

Output - enterprise operating model, Enterprise Alpha

PROPOSED NEXT STEPS

1 Executive Strategy Workshop

Align on priorities, capability vision, success criteria

Joint Opportunity Discovery

- 2 Identify and prioritize high-value use cases

Pilot One Enterprise Capability

- 3 Co-design and validate one capability with measurable outcomes

THANK YOU!

Every startup aims to scale like an enterprise. Every enterprise seeks the agility of a startup. We've helped startups grow and enterprises move faster - driving growth, agility, and innovation.

WE LOOK FORWARD TO PARTNERING WITH YOU.
