Customer Analytics
layer for X, Bigly
Labs

**DRIVING GROWTH
ACROSS EVERY
SPACE**

StatusNeo

The Enterprises are searching
for their Golden Customer

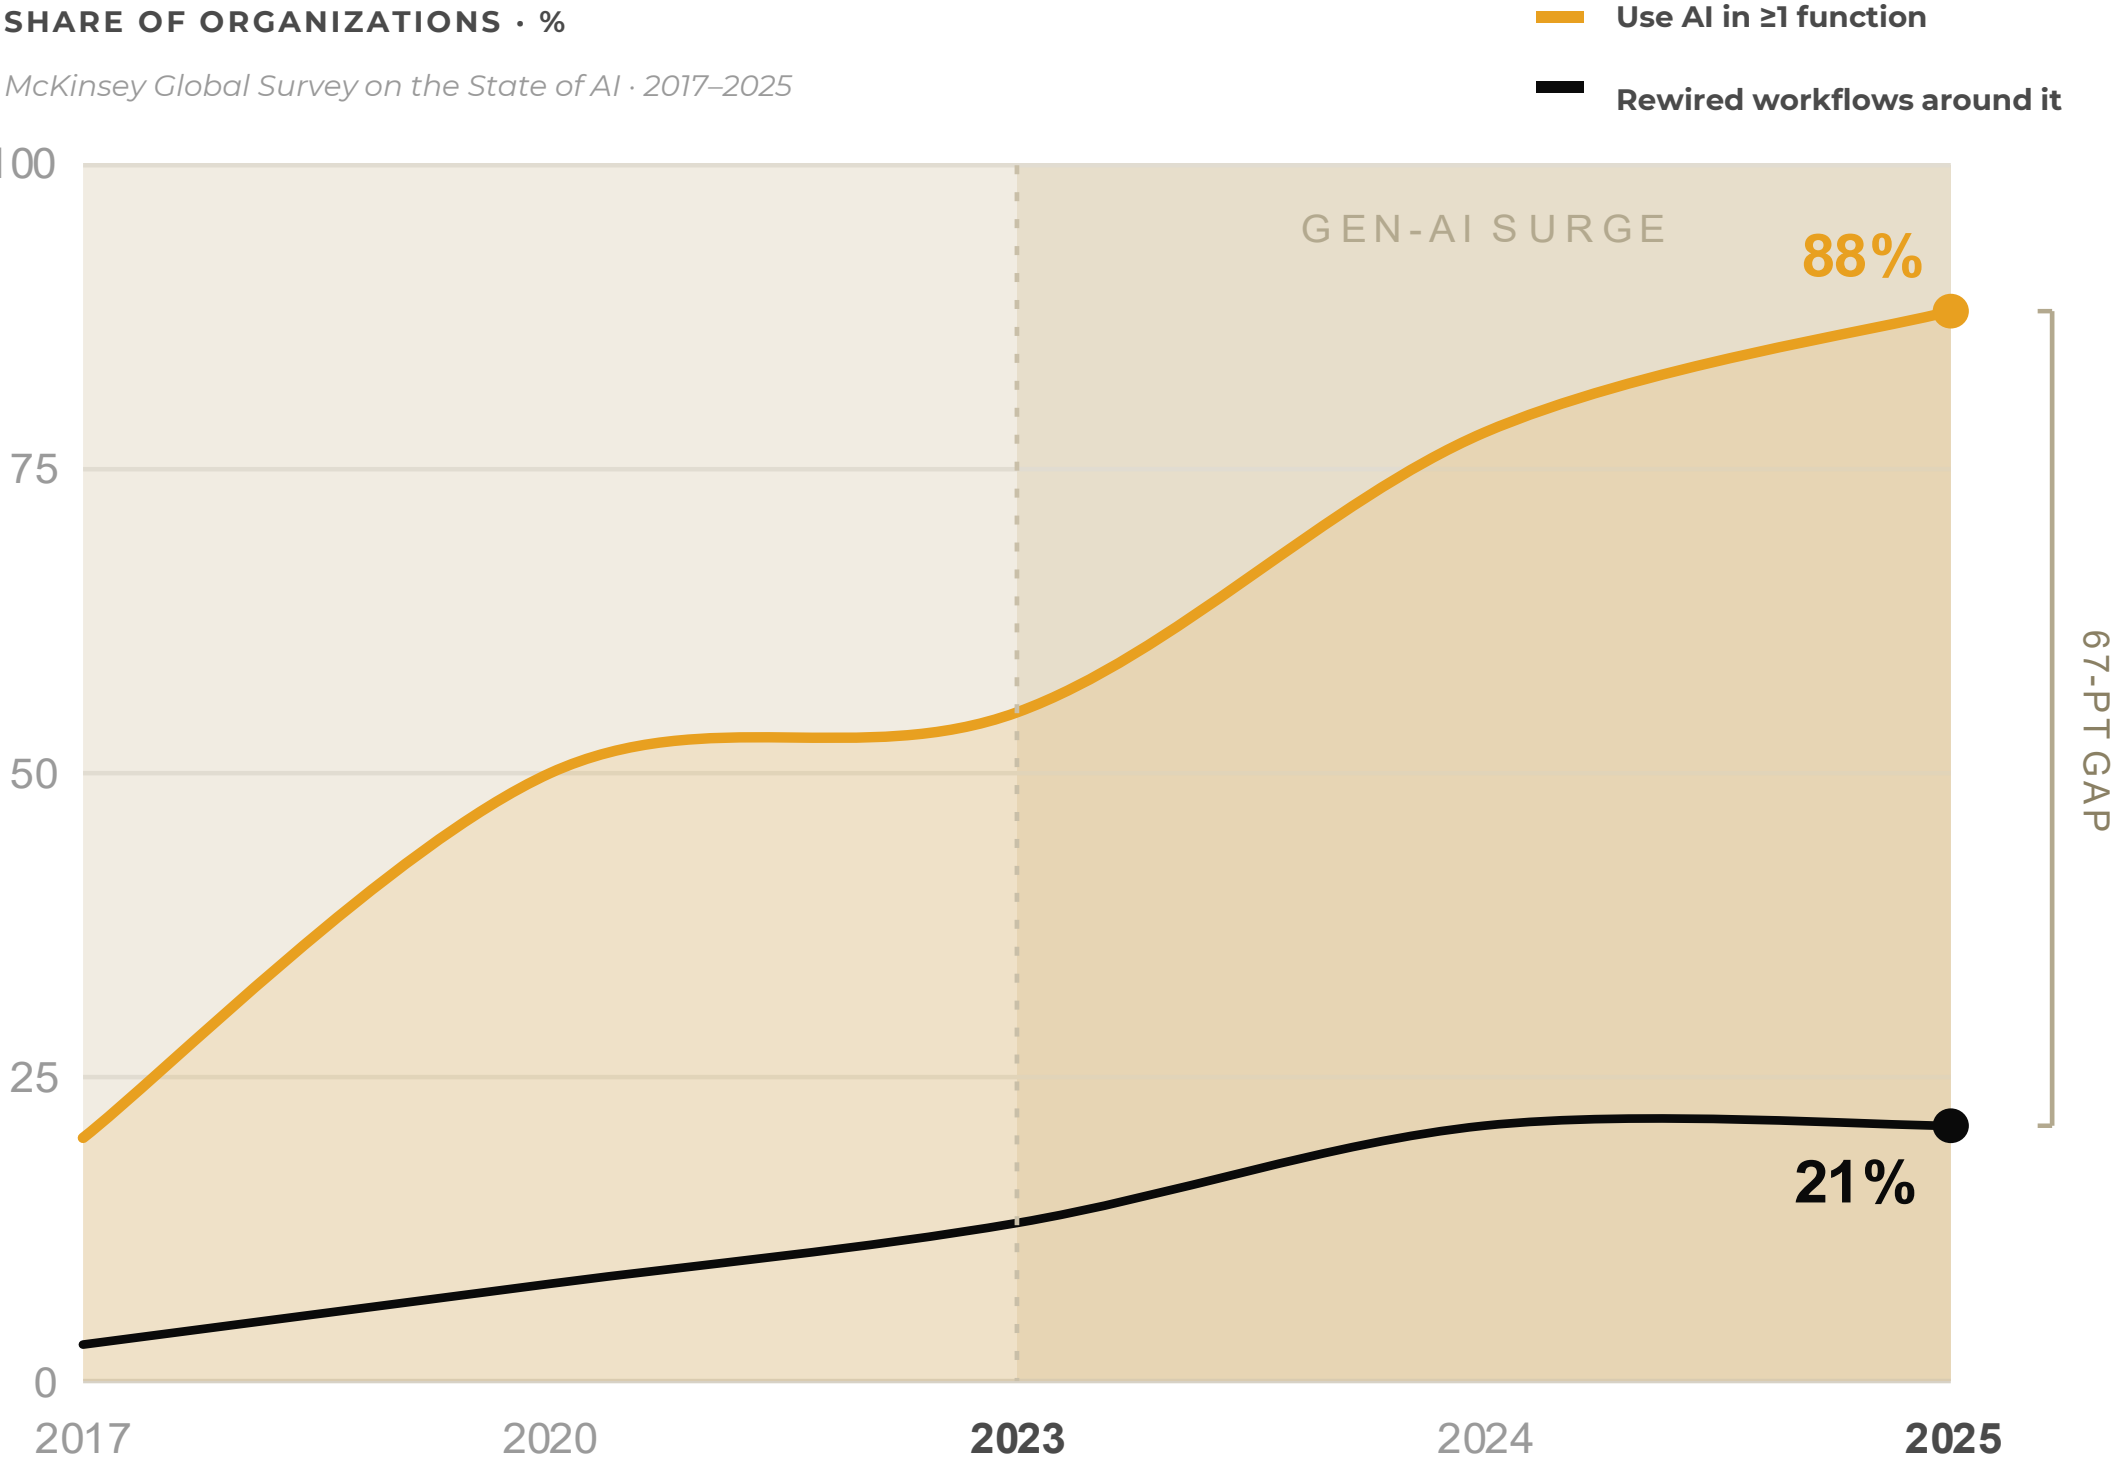

**WE ARE ENTERING A NEW
ERA OF DRIVING GROWTH**

Enterprises adopt AI 4× faster than they rewire the business - golden customer value stalls in the gap

SHARE OF ORGANIZATIONS • %

McKinsey Global Survey on the State of AI • 2017–2025

Source: McKinsey Global Survey on the State of AI 2025 (n=1,993); Publicis Sapient 2026 Global Enterprise AI Report (n=1,550) • Trend lines illustrative between survey waves; endpoint values as reported

ADOPTION OUTFRUNS ALIGNMENT

Enterprises are switching on applications far faster than they rewire the business to use them - and golden customer value drains through the space between.

88%

use AI in ≥1 function

21%

have rewired workflows for it

42%

say the organization can't capture the value

COMMON PITFALLS FOR SOLVING A "GOLDEN CUSTOMER" PROBLEM

- Golden customer profiles get built on assumptions instead of enterprise data reality
- The bottleneck remains the operating model and the complete data layer solution first - 22% of enterprises name it the top barrier
- Value is still trapped in pilot "golden customer" programs - only 7% have scaled their customer data layer to build applications on top of it

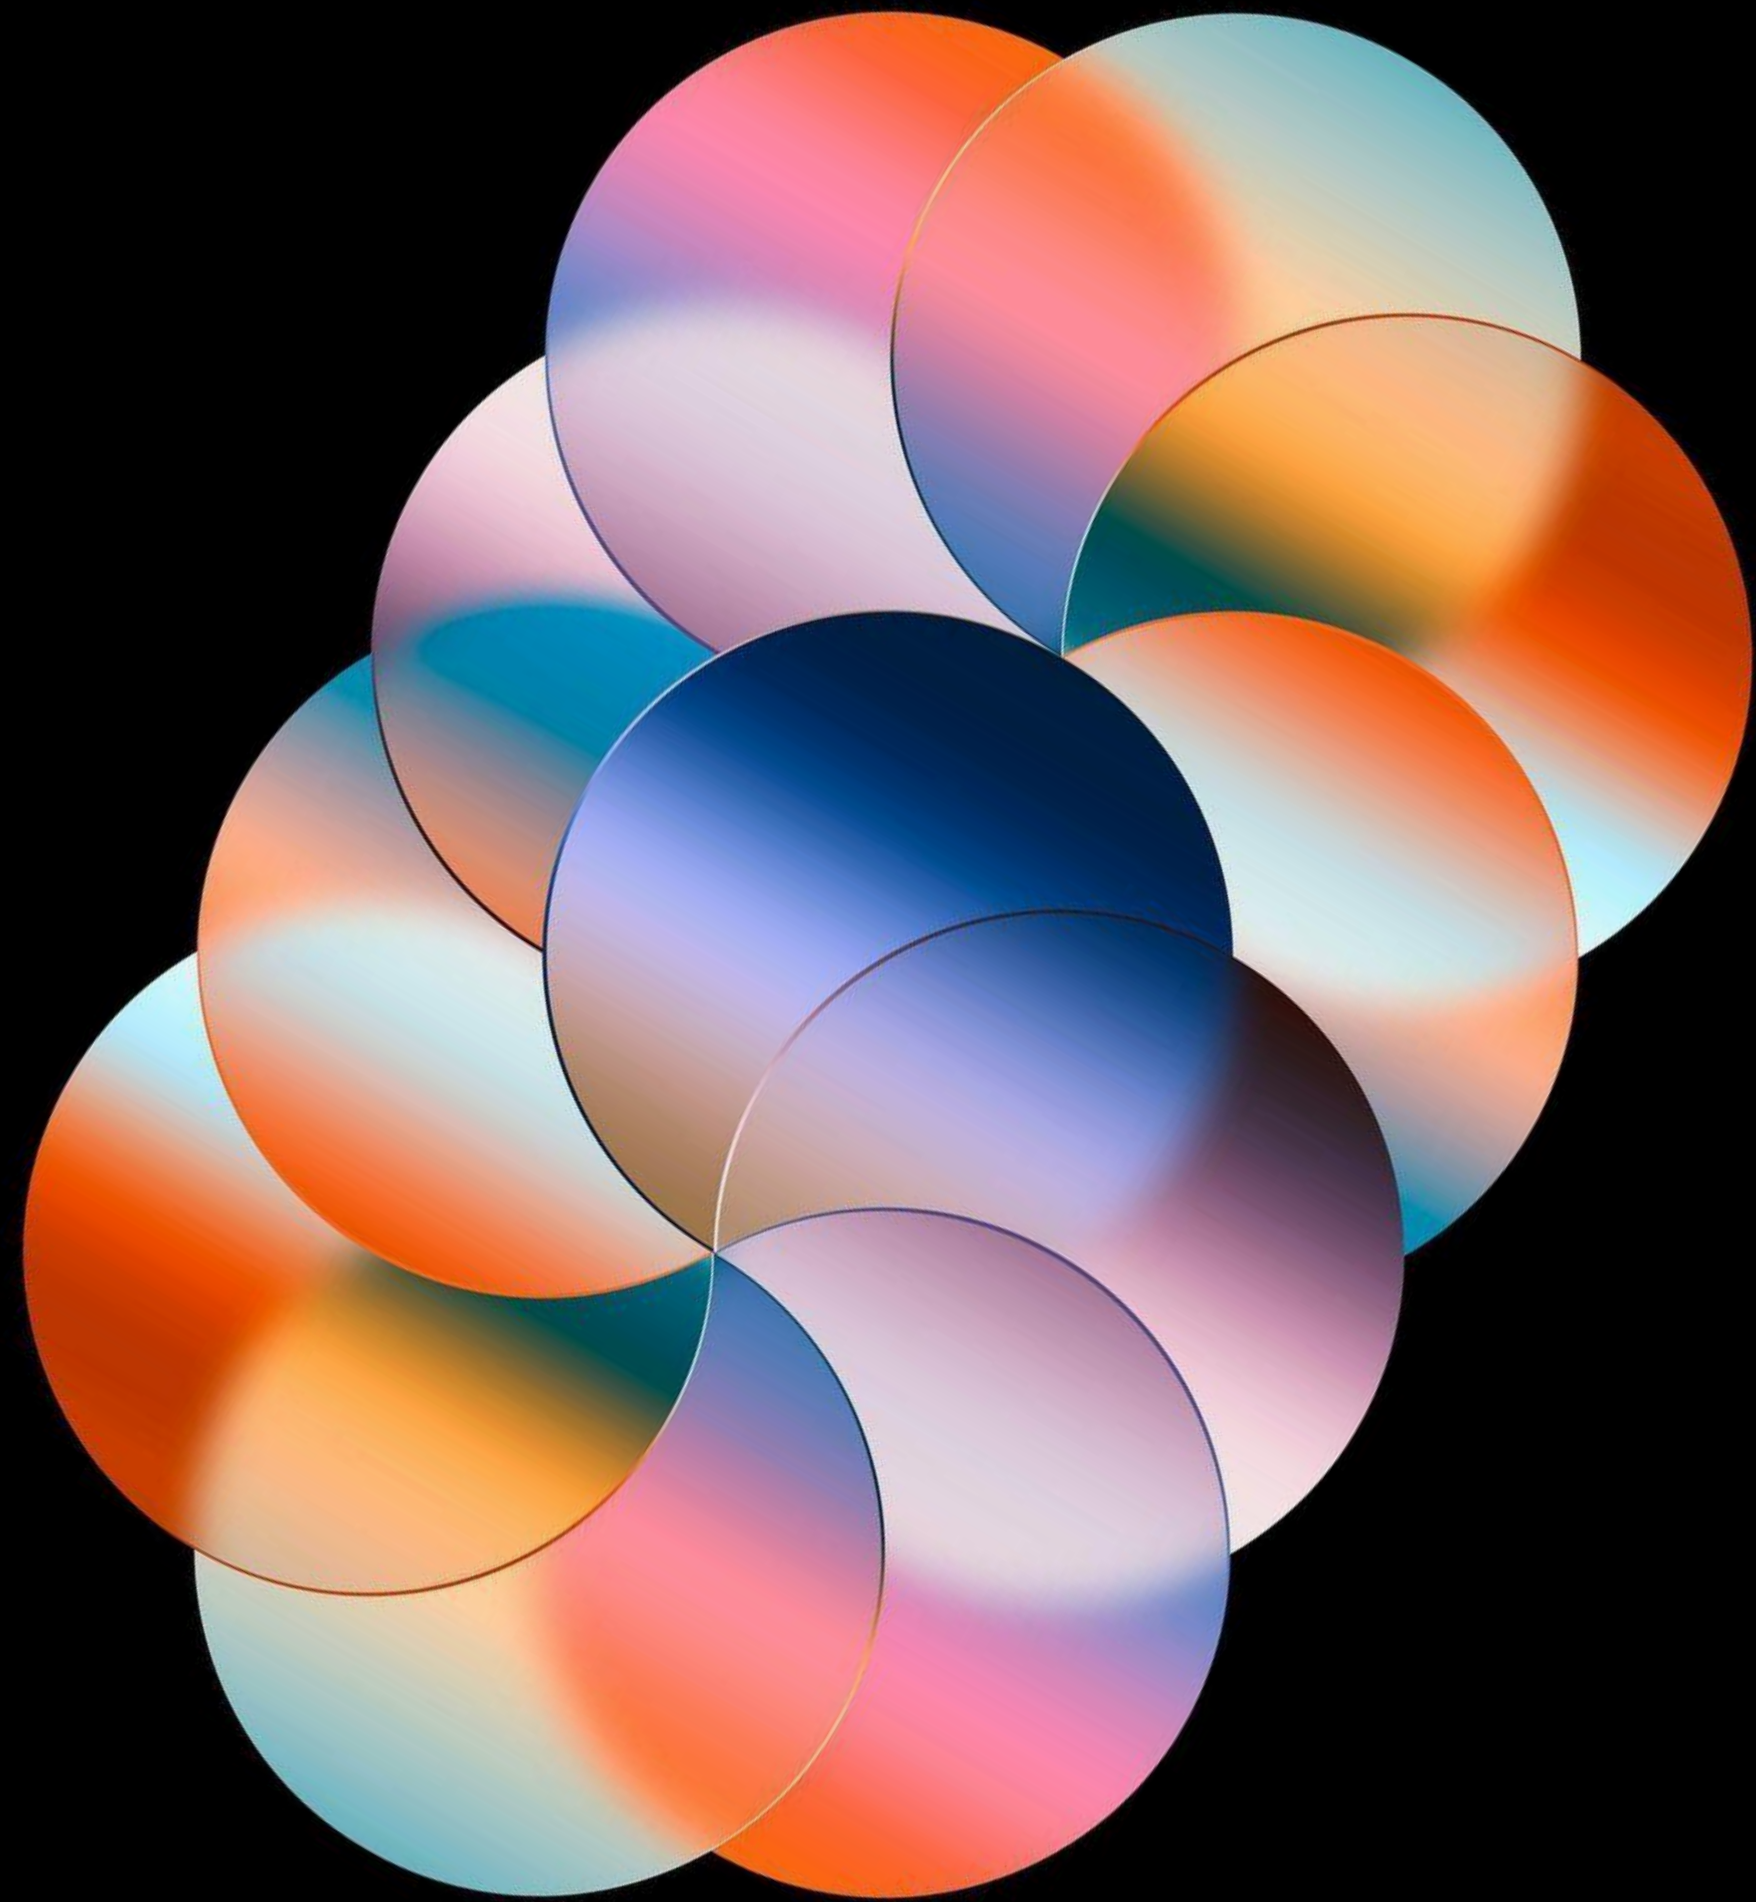

EXECUTIVE TAKEAWAY

Golden customers aren't unlocked by business applications - they're earned by investing to rewire the enterprise to a new reality.

Sustainable golden customer data layer paves the way for new frontier of business applications.
This layer will only be successful if it combines both business KPIs and Architecture alignment

EXECUTIVE TAKEAWAY Companies that succeed treat the customer layer as a business alignment problem first and an architecture problem second - sponsorship and shared KPIs are secured before a pipeline is built, and governance is designed to last well beyond launch.

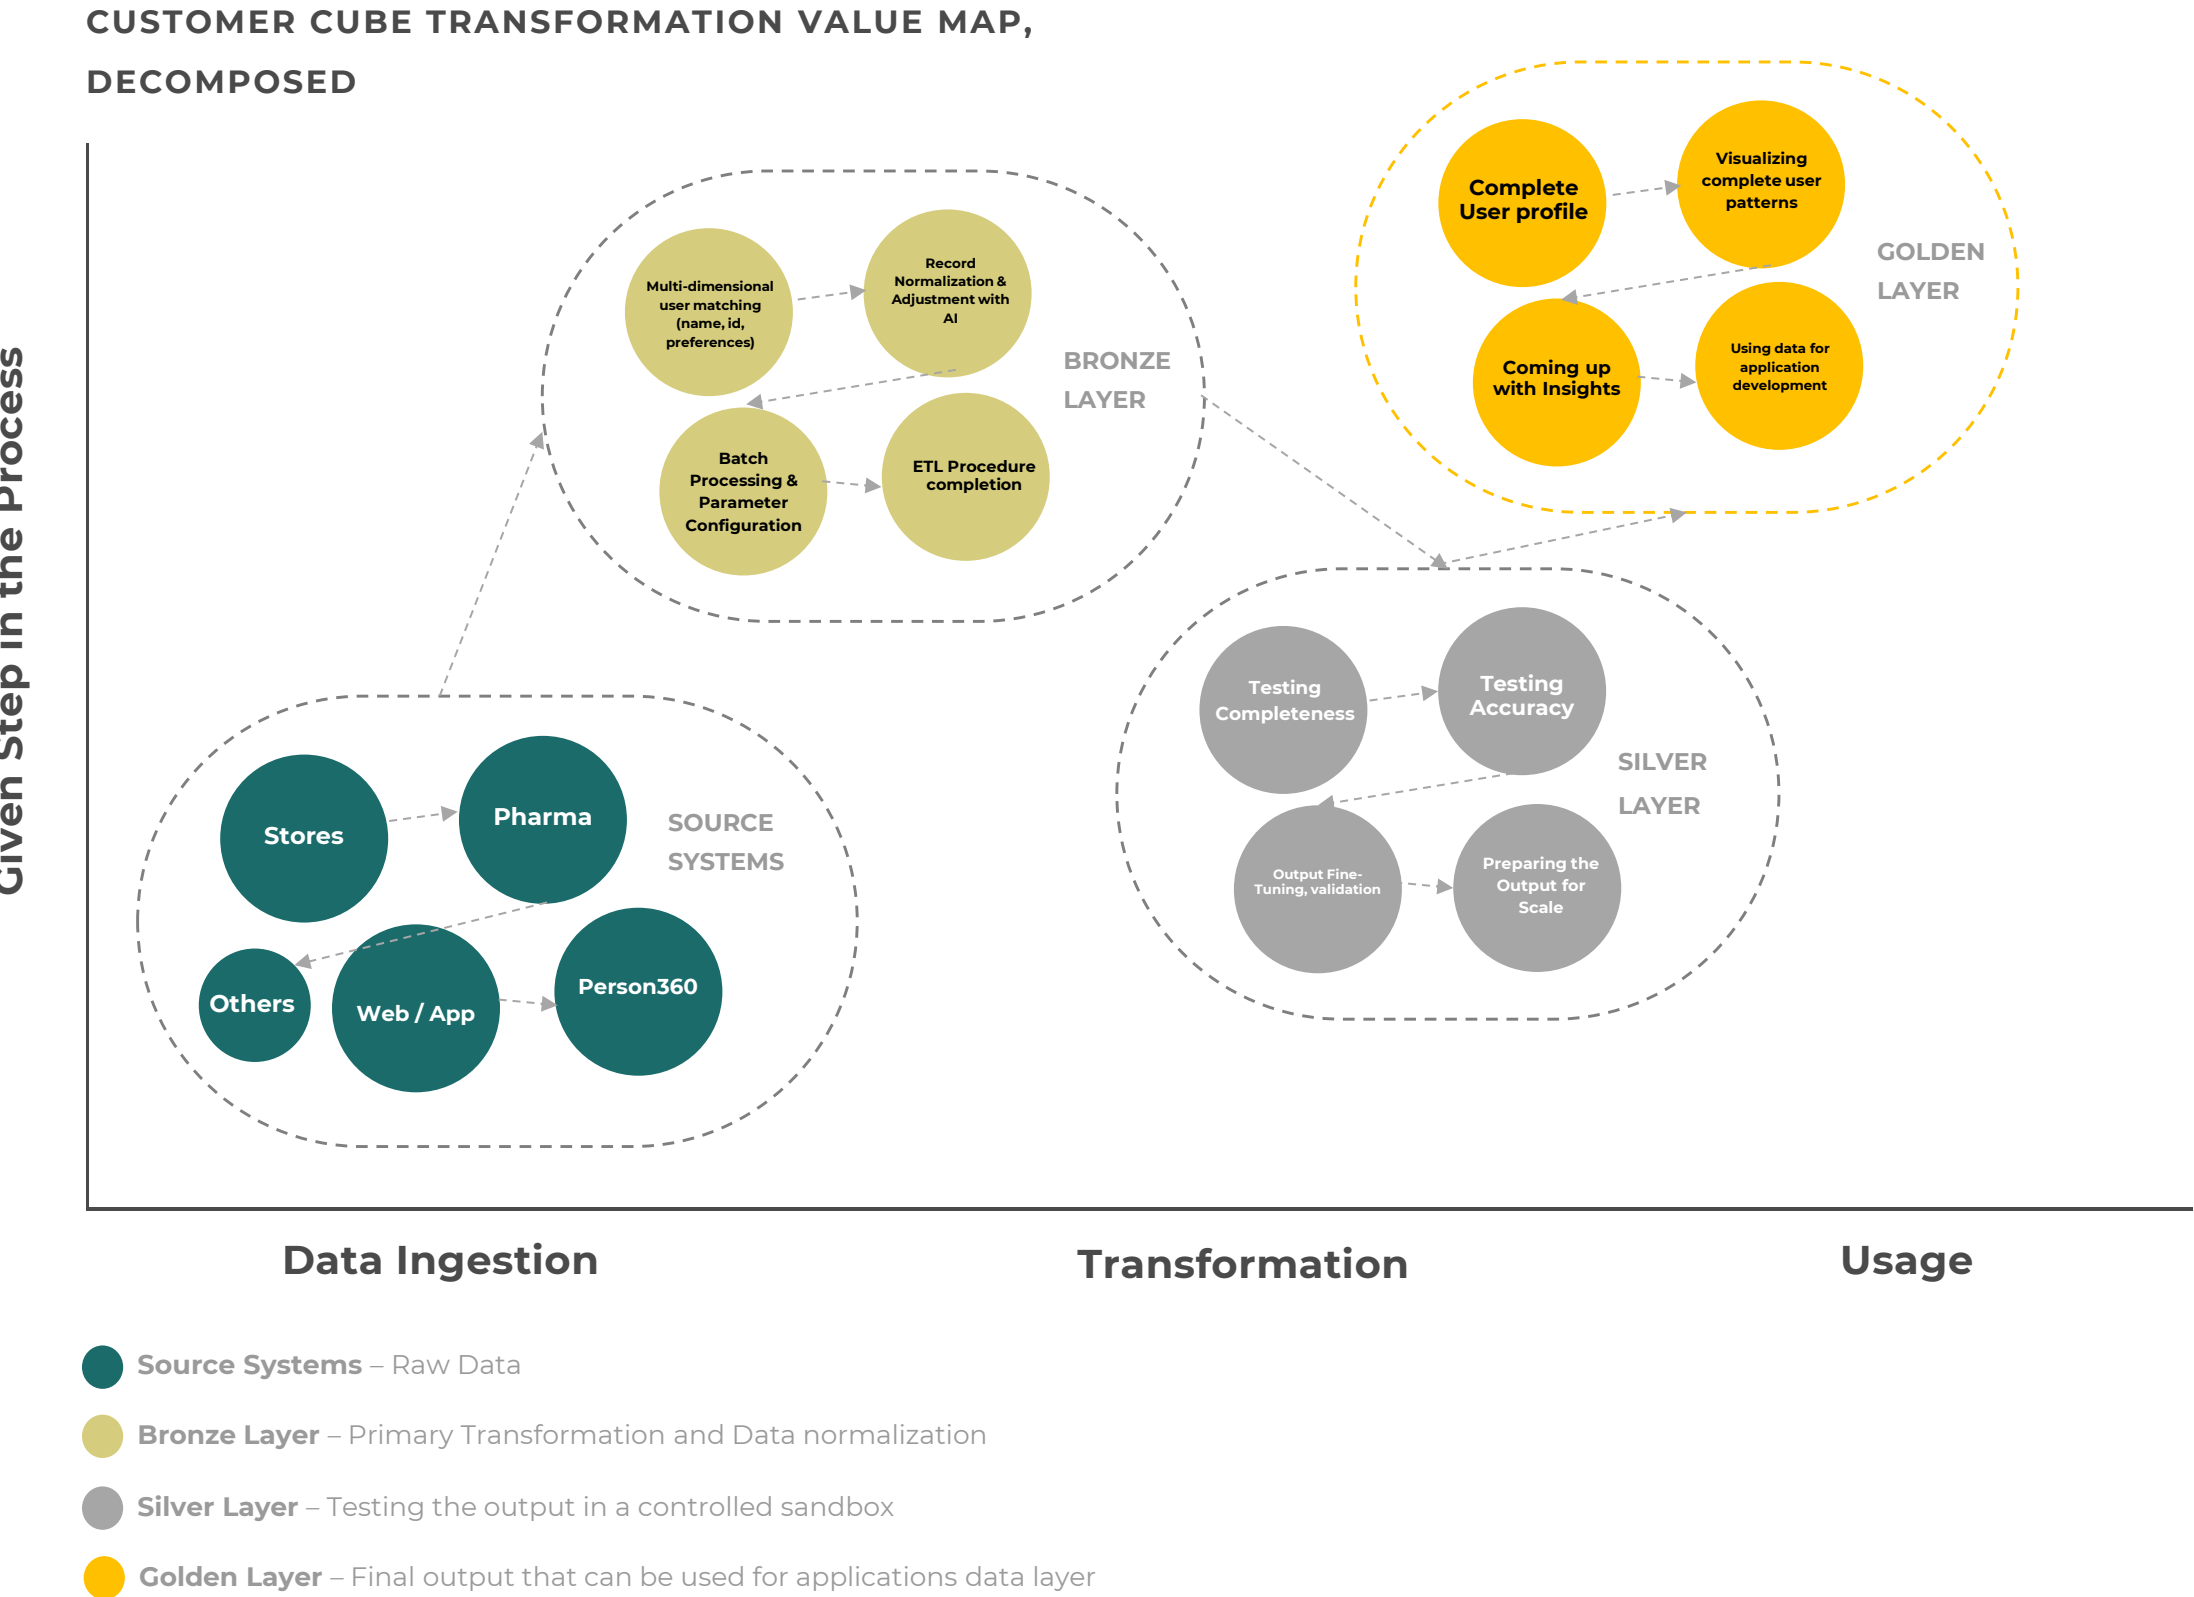

StatusNeo

The customer cube is
market-shaping - a
cornerstone, not an isolated
use-case

**A CLEAR FOUNDATION TO
DRIVE GROWTH**

A StatusNeo framework to establish enterprise foundation before building KPI Trees and Application layer

WHAT DOES SUCCESS LOOK LIKE

Clean separation between raw and governed data

Source systems (Stores, Pharmacy, Web/App, Person360 source feed) stay untouched as raw inputs - every transformation happens downstream, so nothing overwrites or corrupts the original record.

Every layer has a single, testable job

Bronze normalizes and matches identities; Silver validates and stress-tests output in a controlled sandbox; nothing reaches Golden without passing both - so trust in the final layer is earned, not assumed.

Golden layer is the only layer applications touch

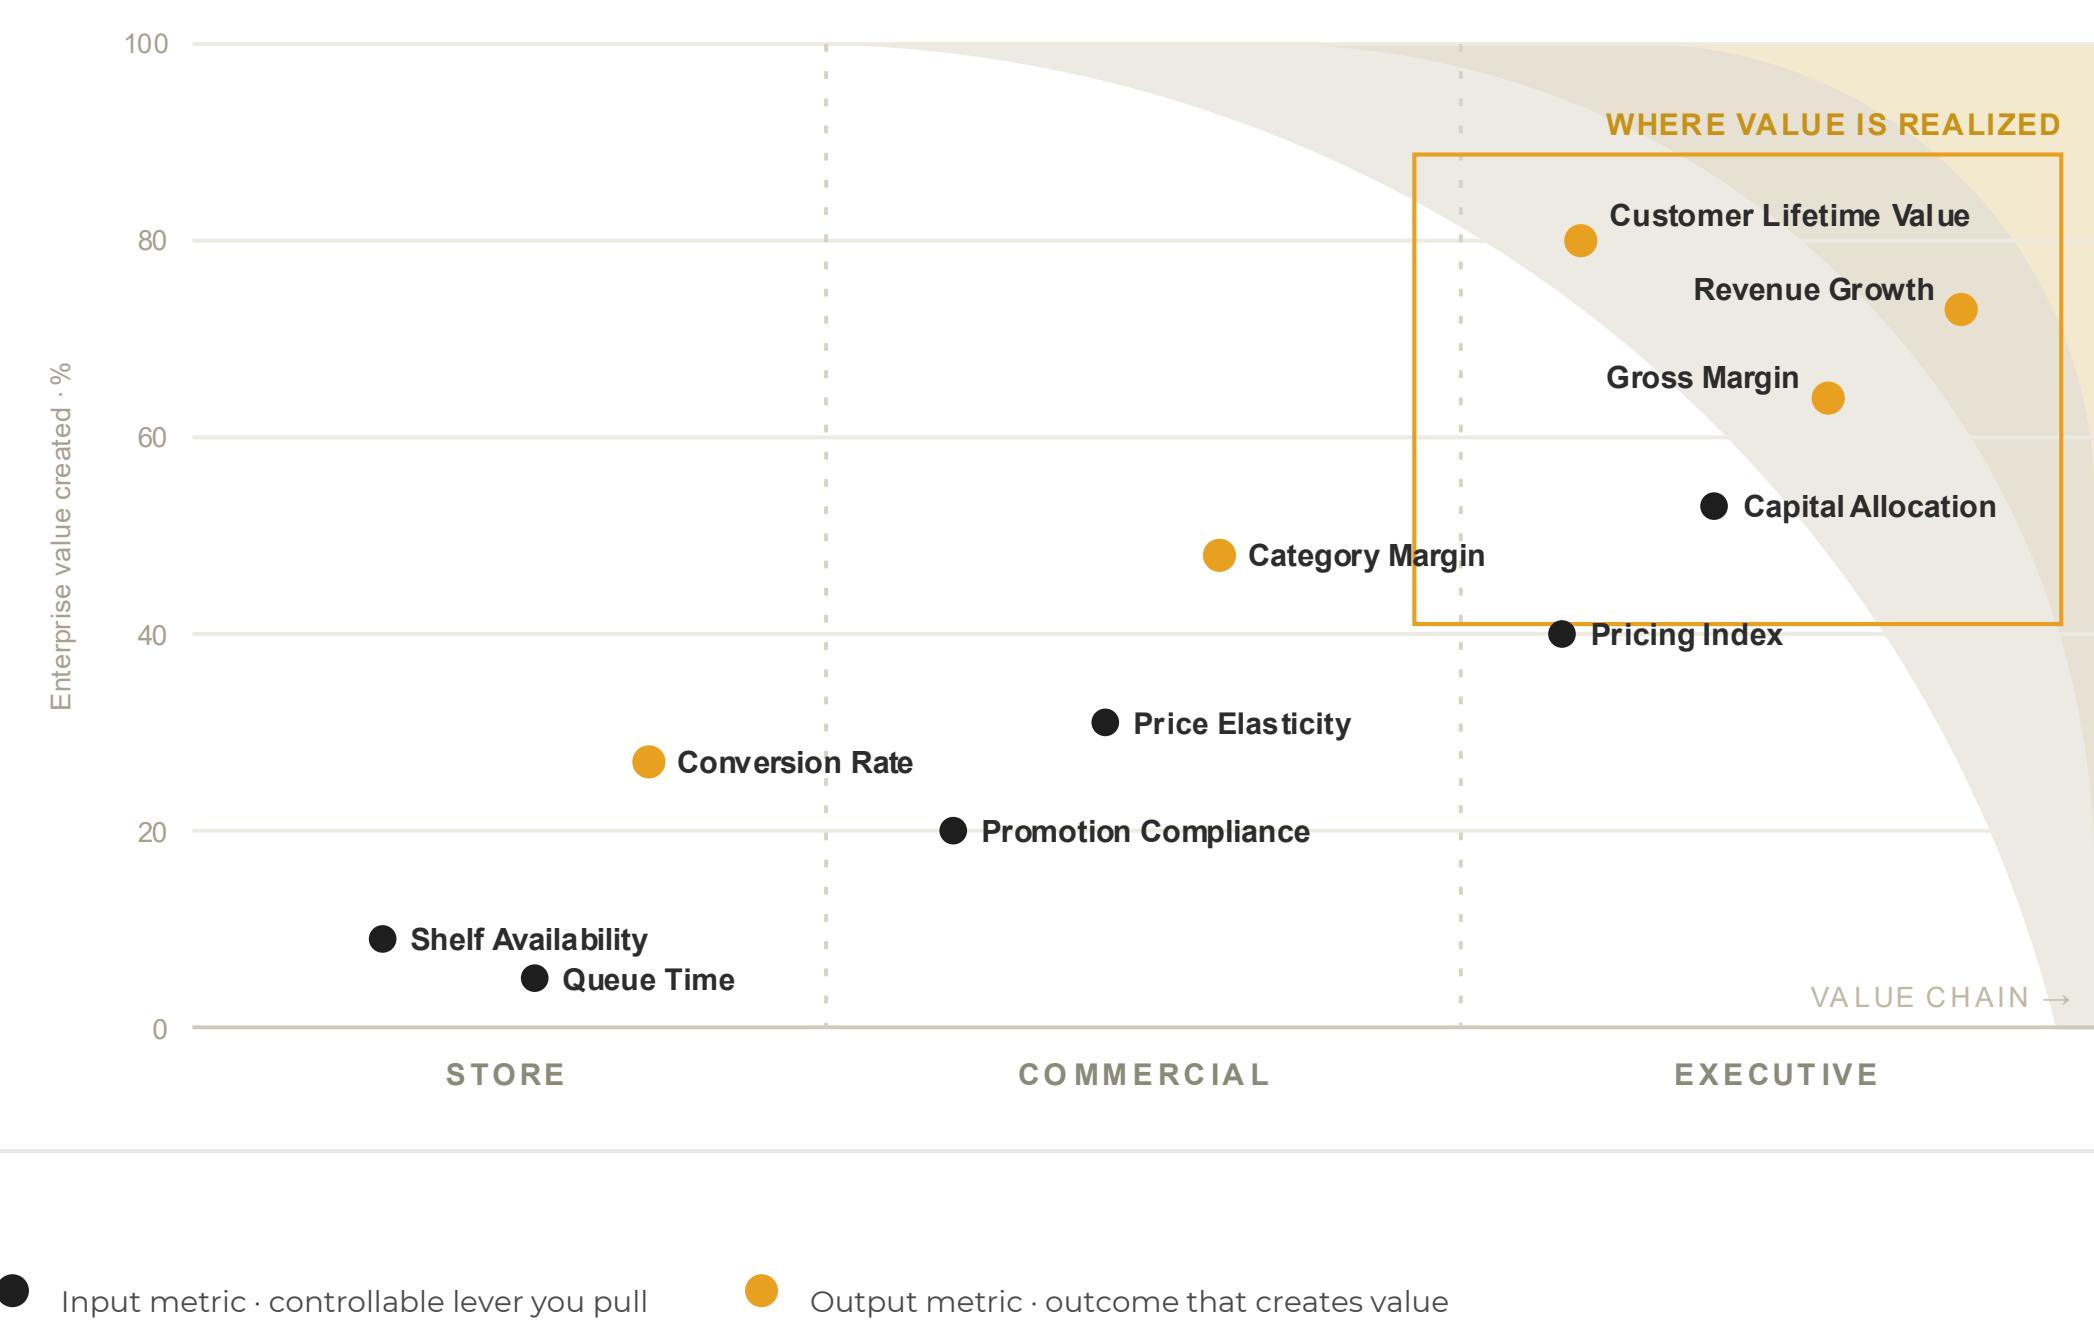

Every downstream use case - reporting, self-service, frontline recommendations - reads exclusively from the Golden layer, so no application ever builds its own shortcut back to raw or partially-processed data.

KEY TAKEAWAY

Success isn't a single unified data dump - it's a disciplined pipeline where each layer earns trust before the next one builds on it, so every application above it inherits a Golden layer that's already validated.

Every business decision should be anchored to one outcome metric and a set of controllable input metrics

Before building KPI trees, every KPI is classified as an **output metric** (a business outcome) or an **input metric** (a controllable lever). Different management levels own different decisions - but all metrics connect to the same enterprise value chain.

KEY TAKEAWAYS

- Every KPI should either measure an outcome or a controllable business lever - nothing else earns a place on the tree
- Output metrics tell leaders whether value was created; input metrics explain why
- KPI trees connect input metrics to output metrics through clear cause-and-effect relationships
- A shared KPI architecture enables decision-driven reporting and self-service analytics - from executives to frontline teams

CLASSIFY EVERY KPI

Output

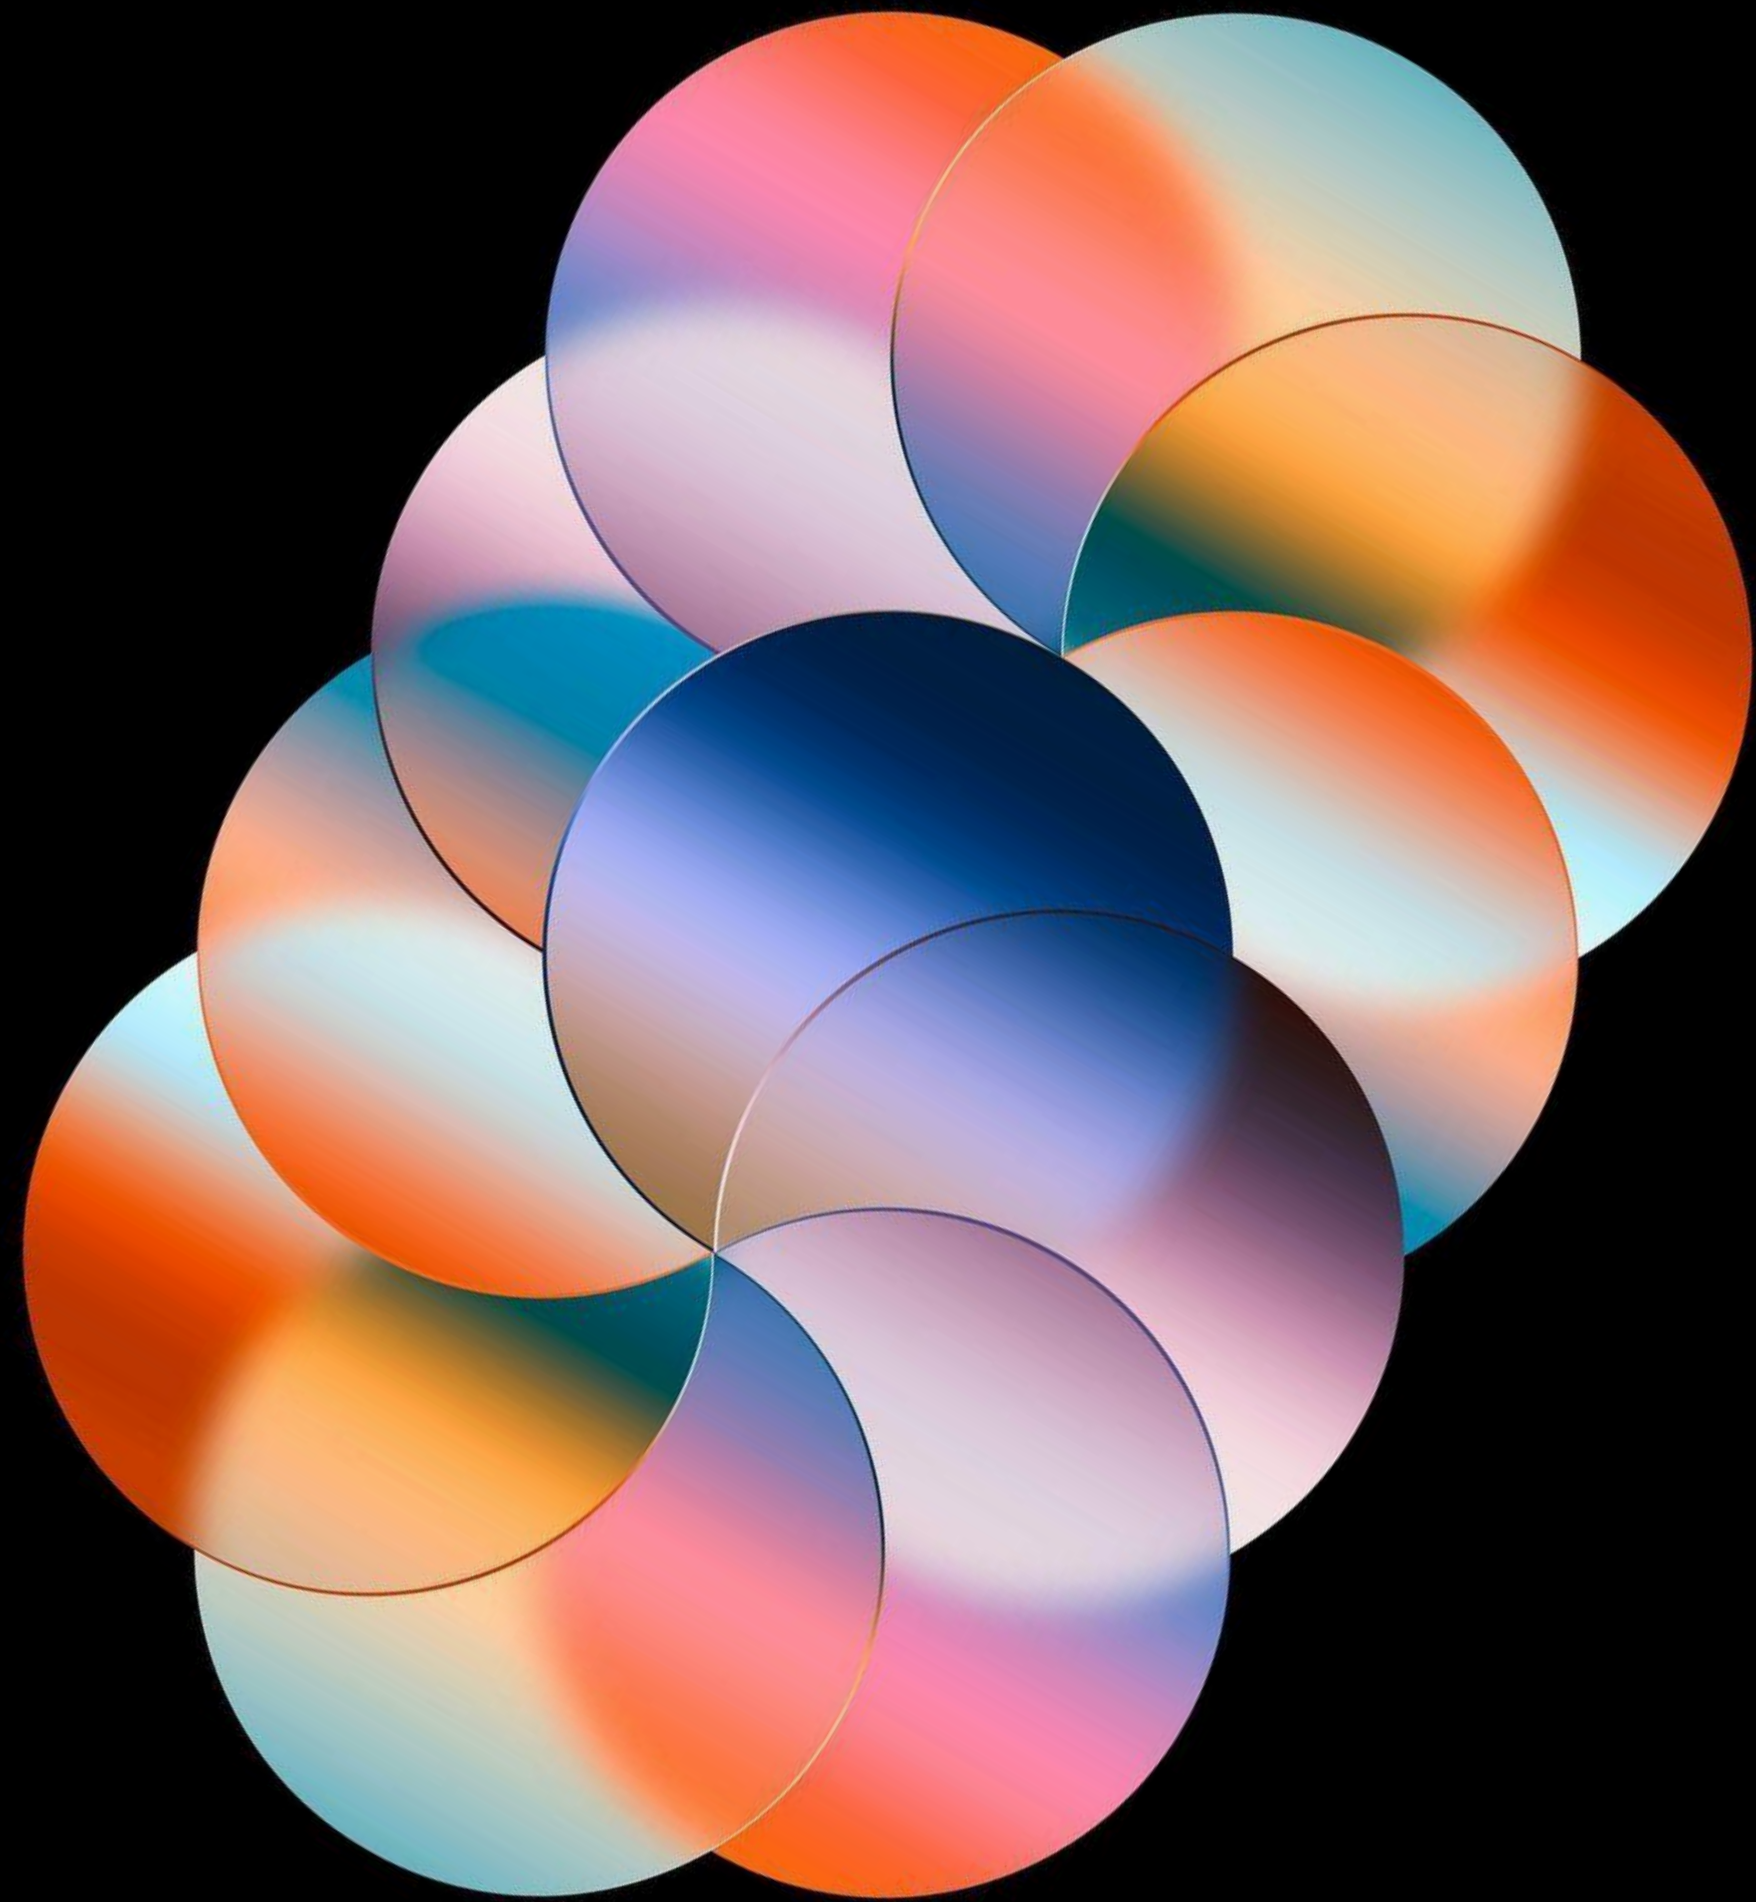

A business outcome - did value get created?

Input

A controllable lever - the reason it moved

EXECUTIVE TAKEAWAY

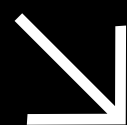

Classify before you connect - a KPI is either an outcome you are accountable for or a lever you can pull

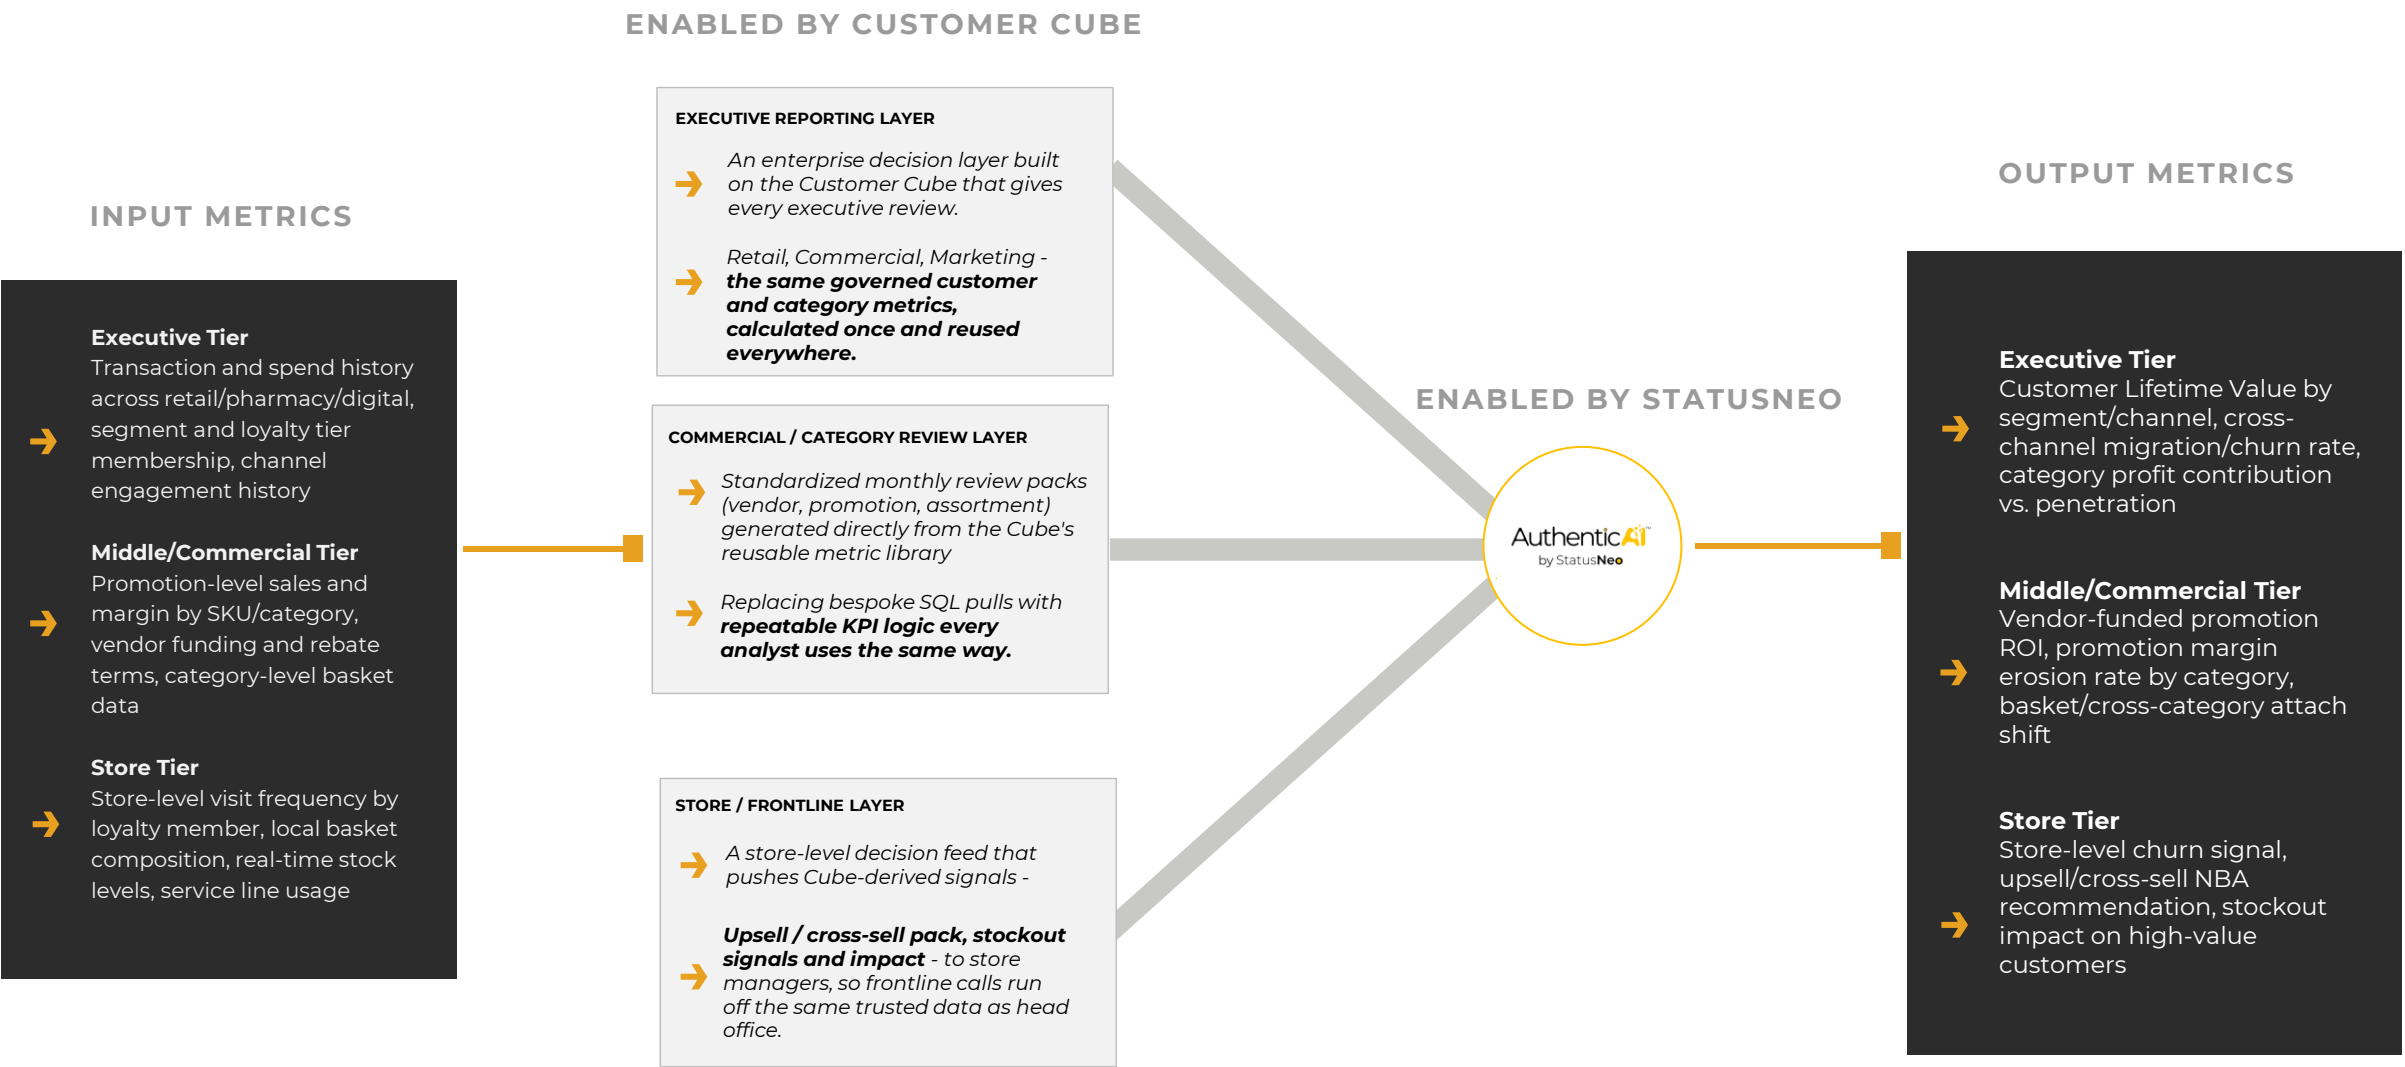

StatusNeo

on top of sustainable
customer profile layer

**DRIVING IMPACT FOR
BUSINESS**

Decision Driven Reporting across the management vertical, dashboards that drive impact by their nature

PROPOSED SOLUTION – EXECUTIVE TAKEAWAY

StatusNeo turns the **Customer Cube** as a foundation to decision intelligence, commercial, and store-level reporting - replacing ad hoc dashboards with governed, decision-driven metrics that scale consistently across every management tier.

THE KPI TREE, WITHIN MANAGEMENT VERTICAL

EXECUTIVE TIER – CAPITAL ALLOCATION, PORTFOLIO HEALTH SIGNALS

- **Customer Lifetime Value by segment/channel** → decides where to put marketing and loyalty investment across retail, pharmacy, and digital
- **Cross-channel customer migration/churn rate** → decides which channel experience to fund to stop leakage (e.g., retail customers going digital-only and disengaging)
- **Category profit contribution vs. customer penetration** → decides which categories to expand or rationalize

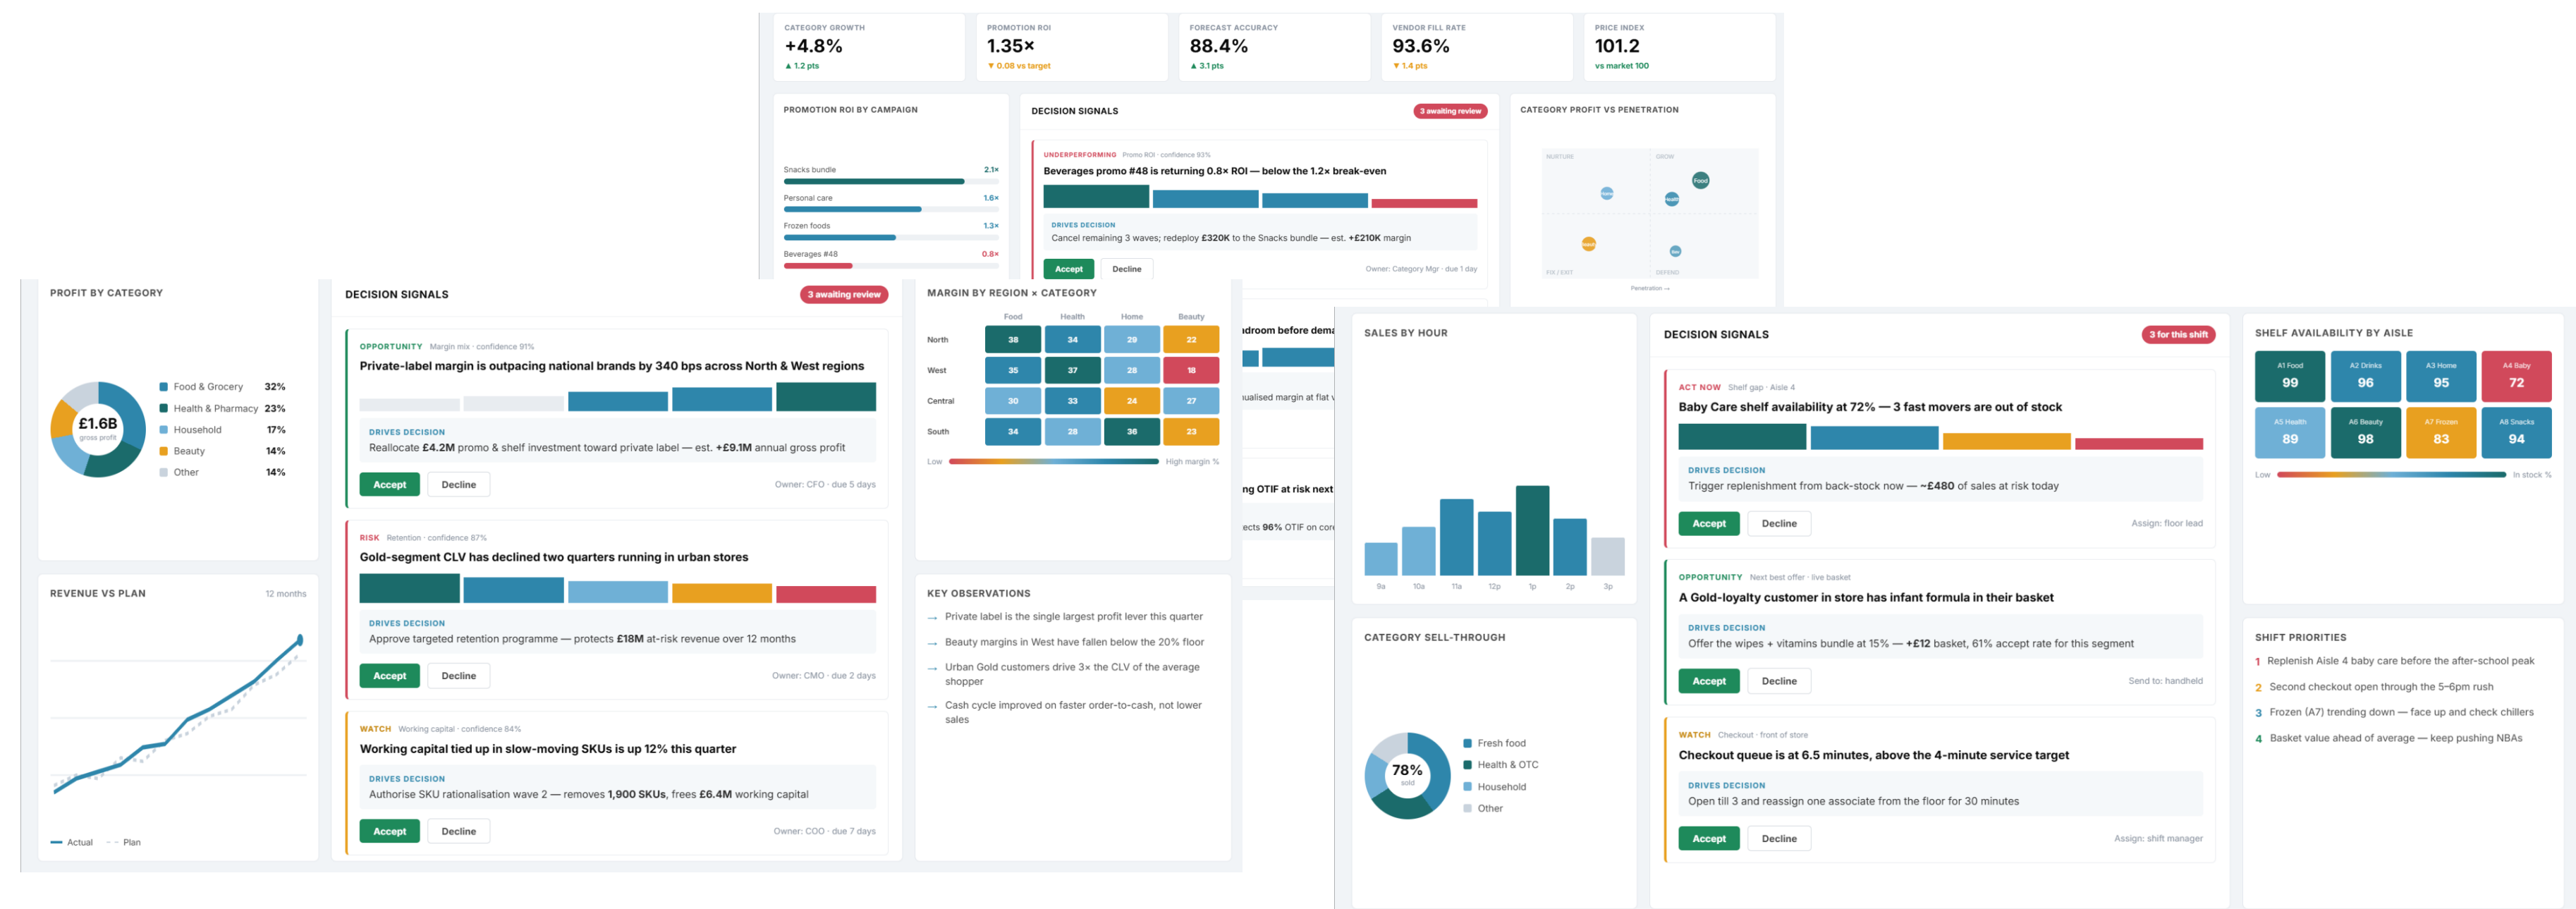

MIDDLE / COMMERCIAL TIER – MONTHLY VENDOR, PROMO, ASSORTMENT CALLS

- **Vendor-funded promotion ROI** → decides which vendors/promotions get renewed or cut next cycle
- **Promotion margin erosion rate by category** → decides whether to keep or kill an underperforming promo mechanic

STORE TIER – DAILY/WEEKLY FRONTLINE ACTIONS

- **Upsell / Cross-sell recommendation and NBA engine** → Driving positive revenue & margin impact
- **Store-level churn signal (declining visit frequency among known loyalty members)** → triggers a local retention action (targeted offer, outreach)
- **Stockout Signals and impact on high-value customers** → decides replenishment priority for SKUs that matter most to top-tier customers

What does Decision Driven Reporting look like in practice across the management vertical?

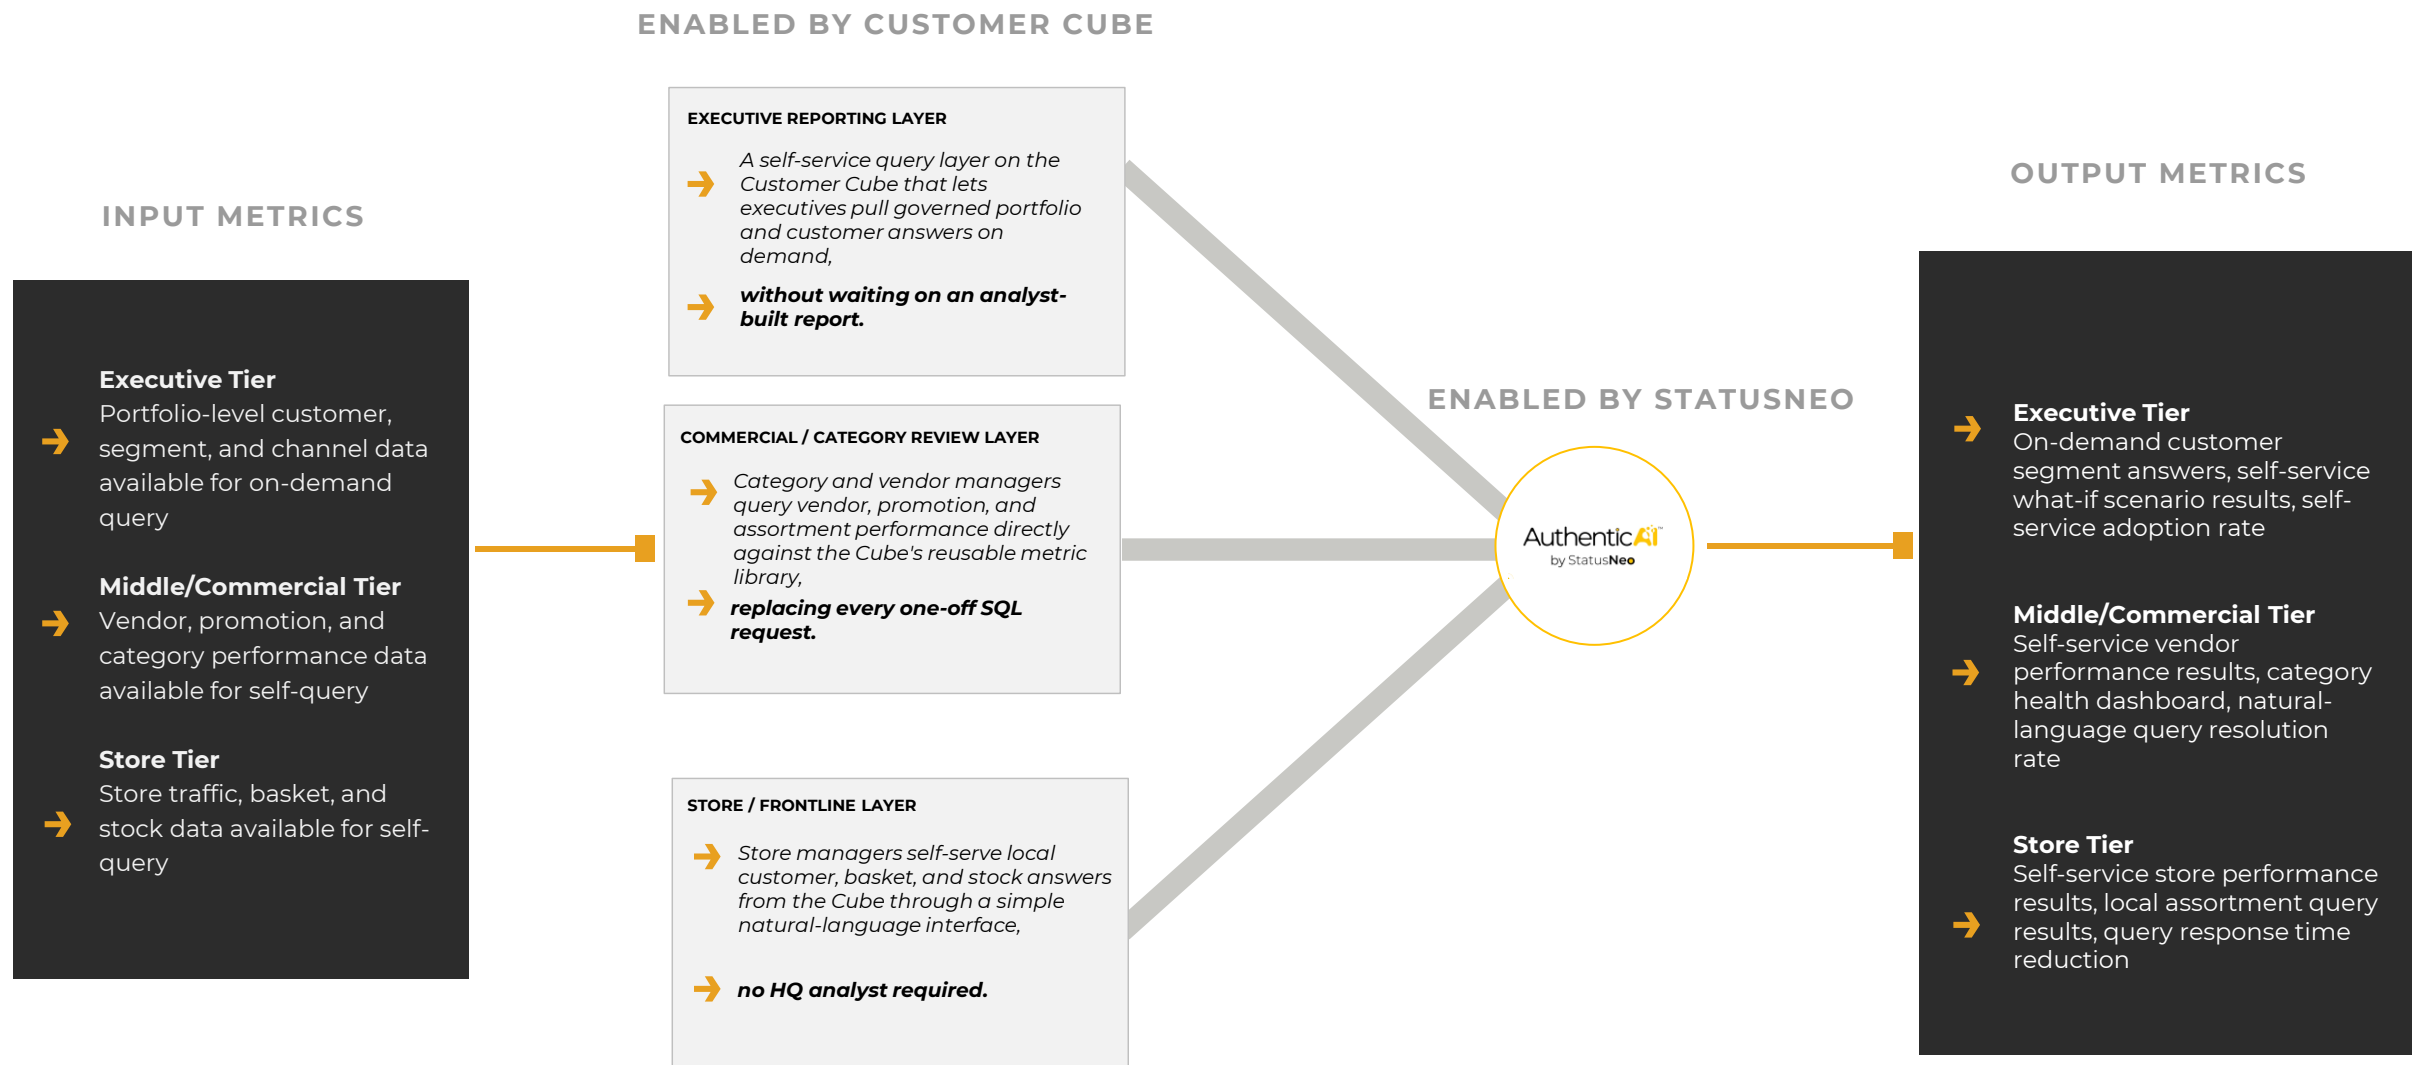

* Figures shown are illustrative (GBP used for mockup purposes only) and will be localized to the client's operating currency.

PROPOSED SOLUTION – EXECUTIVE TAKEAWAY

Instead of static, retrospective dashboards, **we offer dynamic business signals. Every dashboard, view, feed drives a specific input metric, which is finally reflected on the direct impact.** The user has an option to either accept / decline a signal, **which is logged in the central repository and becomes a key input for reinforcement learning.**

Self-Service Analytics Across the Management Vertical, Reducing dependencies on business analyst and speeding up search

PROPOSED SOLUTION – EXECUTIVE TAKEAWAY

StatusNeo turns the Customer Cube into a governed self-service layer - letting executives, category managers, and store teams query trusted customer and performance data directly, without analyst dependency at any level.

THE KPI TREE, WITHIN MANAGEMENT VERTICAL

EXECUTIVE TIER – SELF-SERVE PORTFOLIO INTELLIGENCE

- **On-demand customer segment query** → decides same-day marketing/loyalty spend reallocation instead of waiting weeks for an analyst report
- **Self-service "what-if" scenario modeling (price/promo impact)** → decides pricing or promotion scenarios without commissioning new analysis
- **Self-service tool adoption rate by exec/BU** → decides where to expand self-service investment next

MIDDLE / COMMERCIAL TIER – SELF-SERVE CATEGORY & VENDOR INTELLIGENCE

- **Self-service vendor performance query** → decides vendor renewal without analyst turnaround time
- **Self-serve category health dashboard (margin, penetration, share)** → decides shelf-space and promo-budget reallocation same-week
- **Natural-language query resolution rate** → decides where to expand AI copilot capability across categories

STORE TIER – SELF-SERVE LOCAL INTELLIGENCE

- **Self-service store performance query (traffic, basket, top customers)** → decides daily staffing or local promotion action without an HQ report
- **Self-serve local assortment query** → decides local stock reallocation
- **Query response time reduction** → decides how much frontline responsiveness has actually improved

StatusNeo owns a Cloud Agnostic Framework to translate the raw data to insights, on-demand – reducing dependency on analysts and speeding up search

A high-level approach

Architecture Overview

- Lakehouse → Semantic Model (Direct Lake) → AI Agent → surfaced in Power BI & Microsoft Teams.
- SQL Analytics Endpoint for ad-hoc views; Purview for lineage.

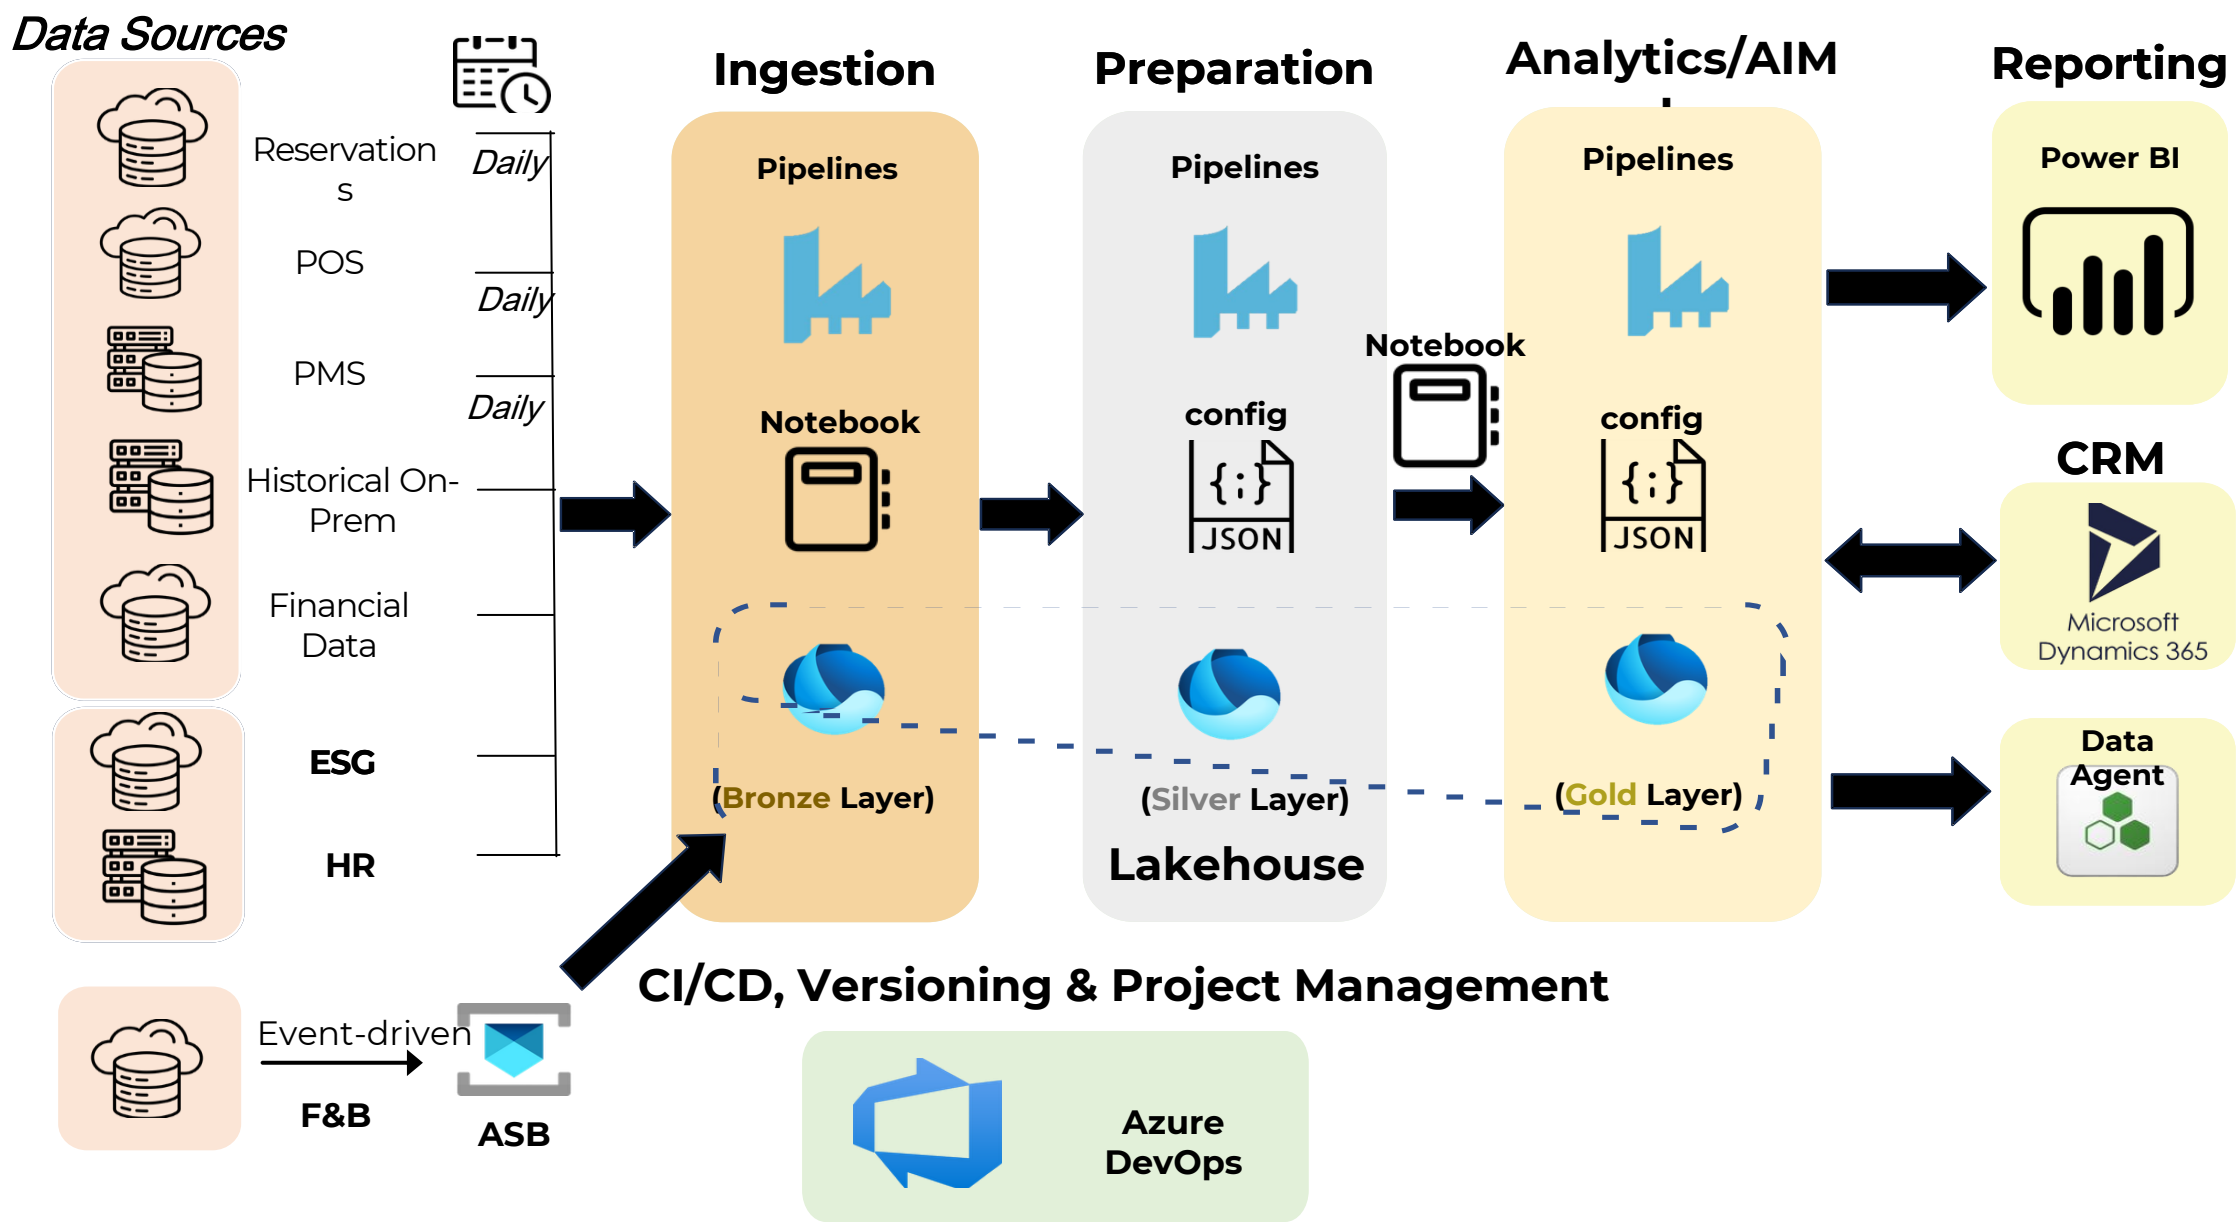

Context Injection (the differentiator)

- Labeled acronyms & short forms.
- “**What lives where**”: explicit table/measure mapping so the agent picks the right source.
- Business synonyms & **canonical KPI** definitions baked into the model.

Security & trust

- RLS/OLS by grouping; PII masked; activity & query logs for audit.
- Transparent answers with the underlying

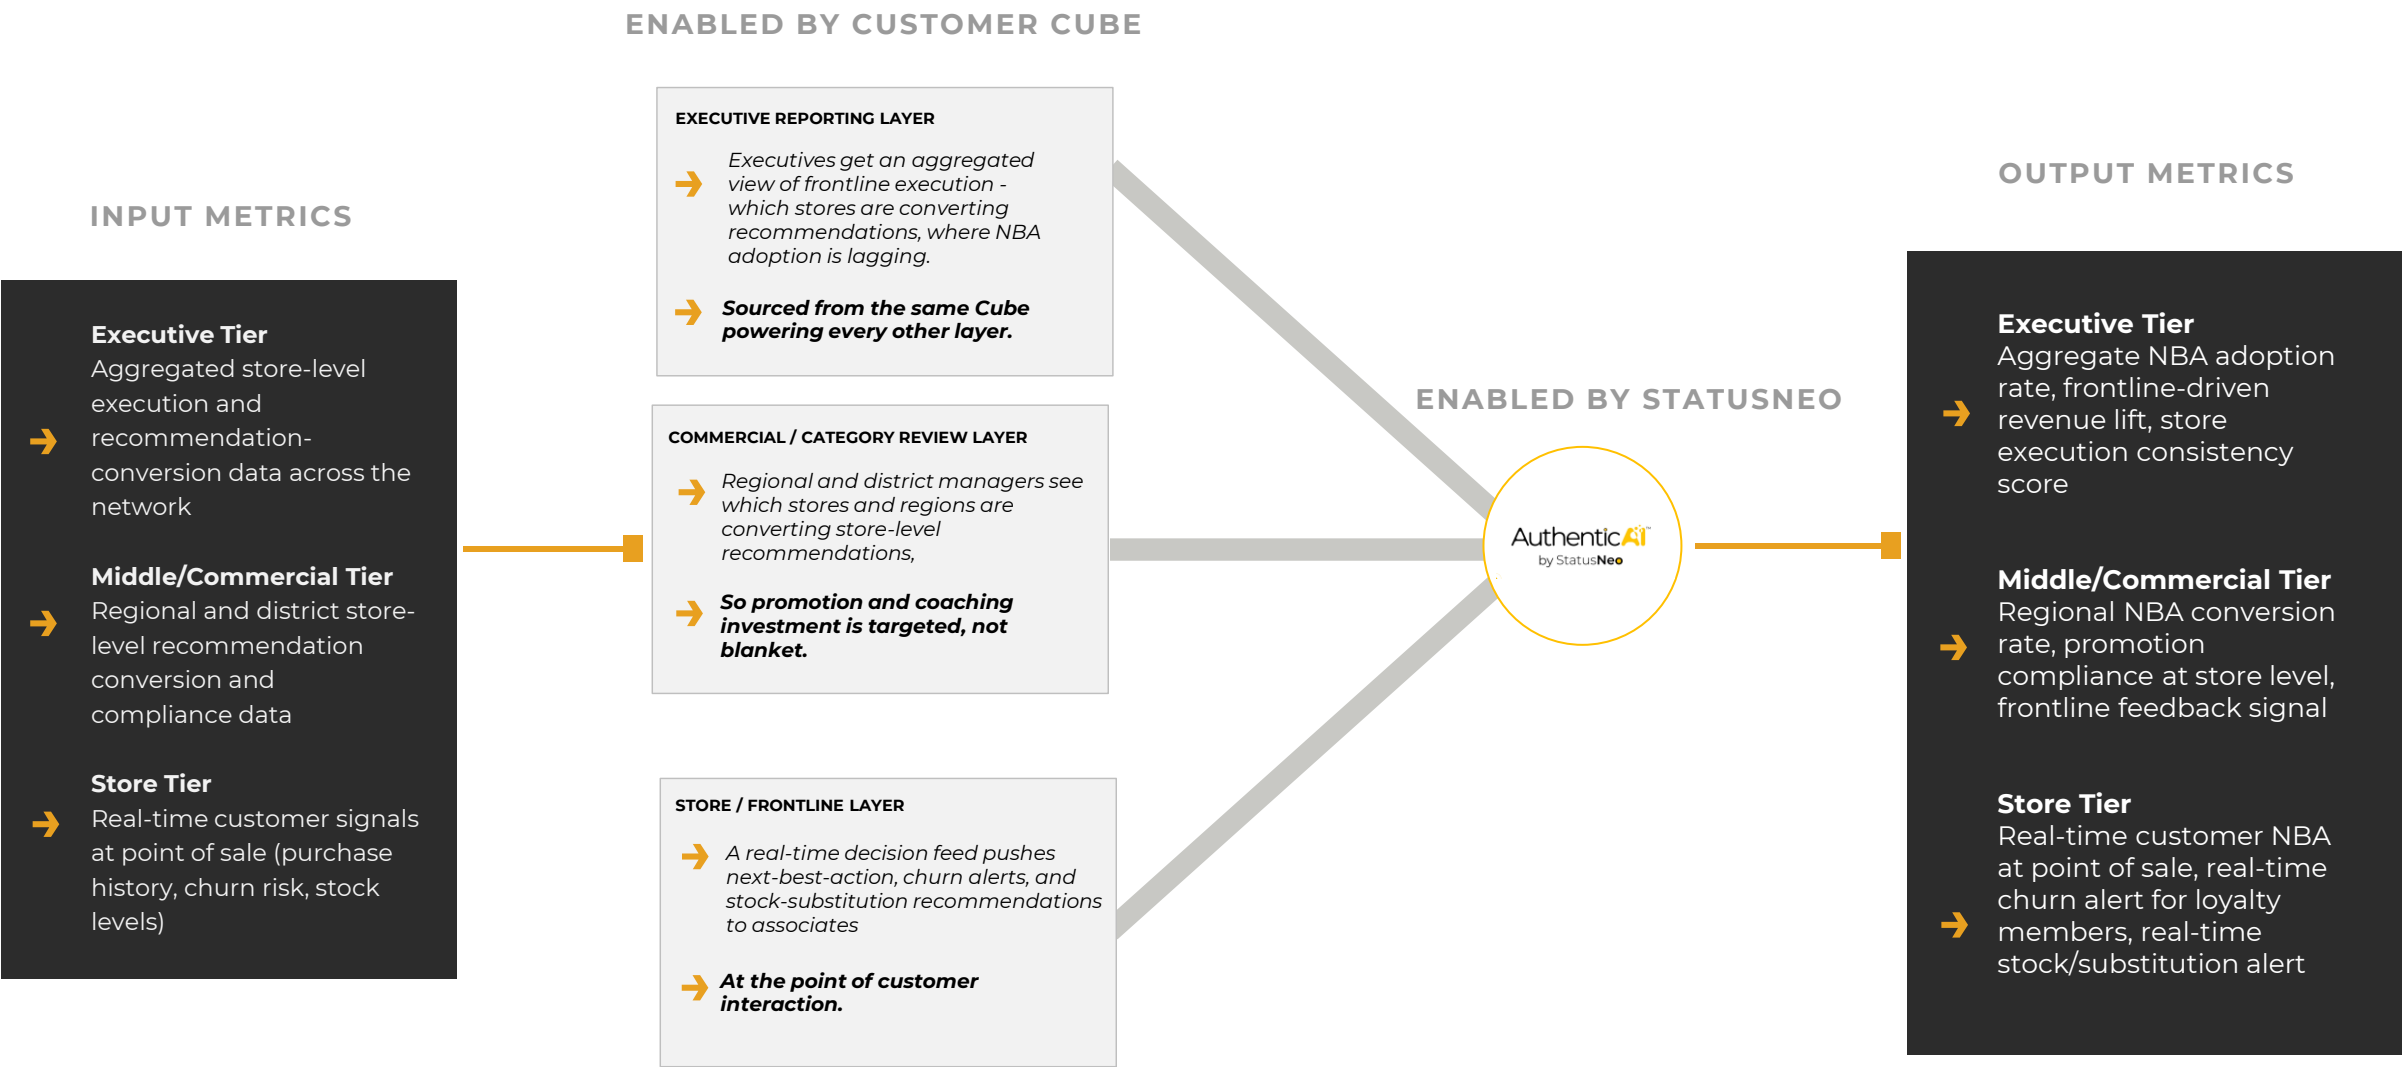

Enterprise DataLake Integration - Reference Architecture

* The slide references Microsoft ecosystem (Azure, MS Fabric, dynamics), but framework can be replicated on every cloud / data analytics platform that X, Bigly Labs uses

Frontline Decision Support Enabling Store-Level Associates

Drive more impact for the business, on a daily basis

PROPOSED SOLUTION – EXECUTIVE TAKEAWAY

StatusNeo extends the Customer Cube to the point of customer interaction - giving store associates real-time, trusted recommendations while giving regional and executive leadership visibility into what's actually converting.

THE KPI TREE, WITHIN MANAGEMENT VERTICAL

EXECUTIVE TIER – ENTERPRISE FRONTLINE PERFORMANCE

- **Aggregate NBA (next-best-action) adoption rate across stores** → decides where to invest further in store enablement tools
- **Frontline-driven revenue lift (attributable to recommendations)** → decides whether to scale a successful store program company-wide
- **Store execution consistency score** → decides which regions need operational intervention

MIDDLE / COMMERCIAL TIER – REGIONAL & DISTRICT ENABLEMENT

- **Regional NBA conversion rate** → decides which regions get additional coaching or resources
- **Promotion compliance at store level** → decides adjustments to vendor/promotion program design
- **Frontline feedback signal (associate-flagged issues)** → decides assortment or pricing corrections upstream

STORE TIER – REAL-TIME ASSOCIATE ACTIONS

- **Real-time customer NBA at point of sale** → decides which product/offer an associate recommends in the moment
- **Real-time churn alert for loyalty members in-store** → triggers immediate service-recovery action
- **Real-time stock/substitution alert** → decides which product an associate recommends when the preferred item is out of stock

In Retail & CPG we connect the enterprise on one core - and the same KPIs move by double digits

TECHNOLOGY · WHAT WE BUILT

- 01

Connected finance & merchandising on one ERP core
SAP Joule and core ERP driving connected finance, merchandising and inventory data across all formats
- 02

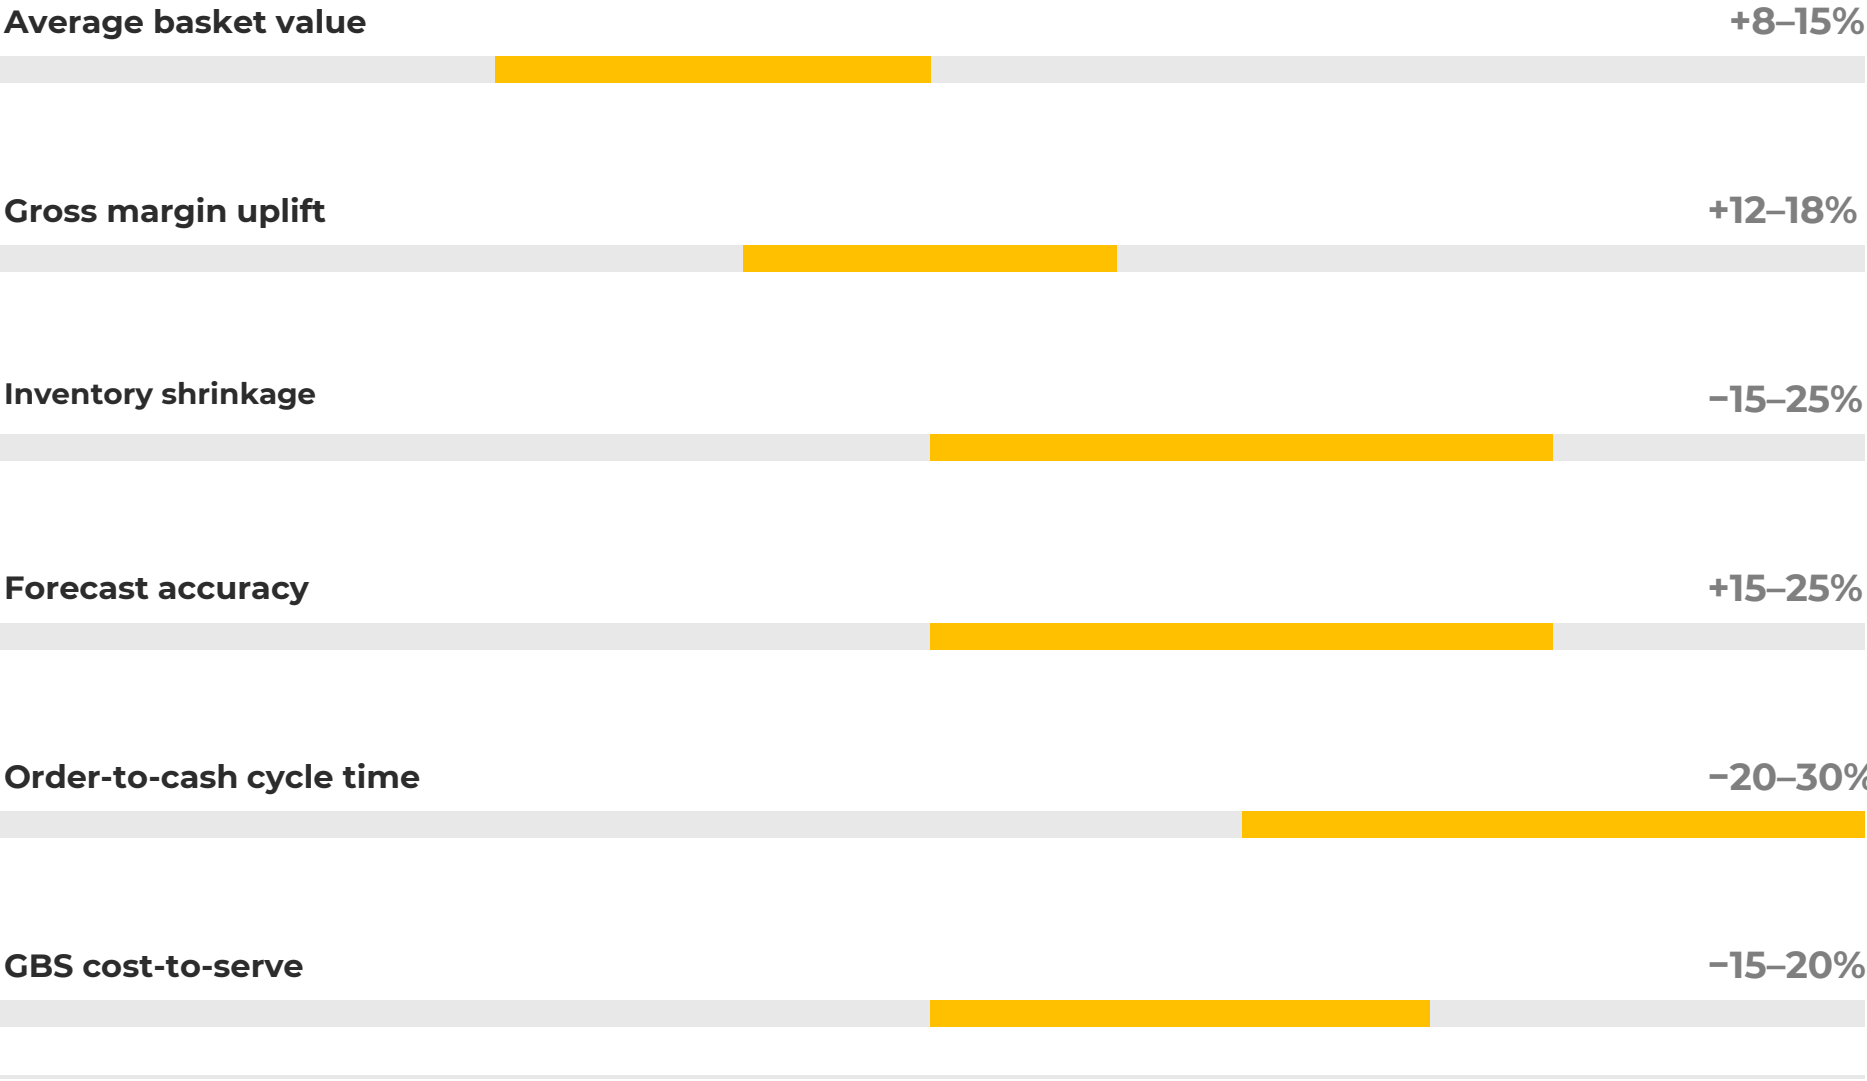

Global Business Services on shared data & AI
GBS reshaped around shared data and AI services instead of siloed regional teams
- 03

Demand-to-cash unified into one workflow
Demand forecasting, key account management and order-to-cash connected into one workflow instead of three

SAMPLE BASELINE KPIS (ILLUSTRATIVE)

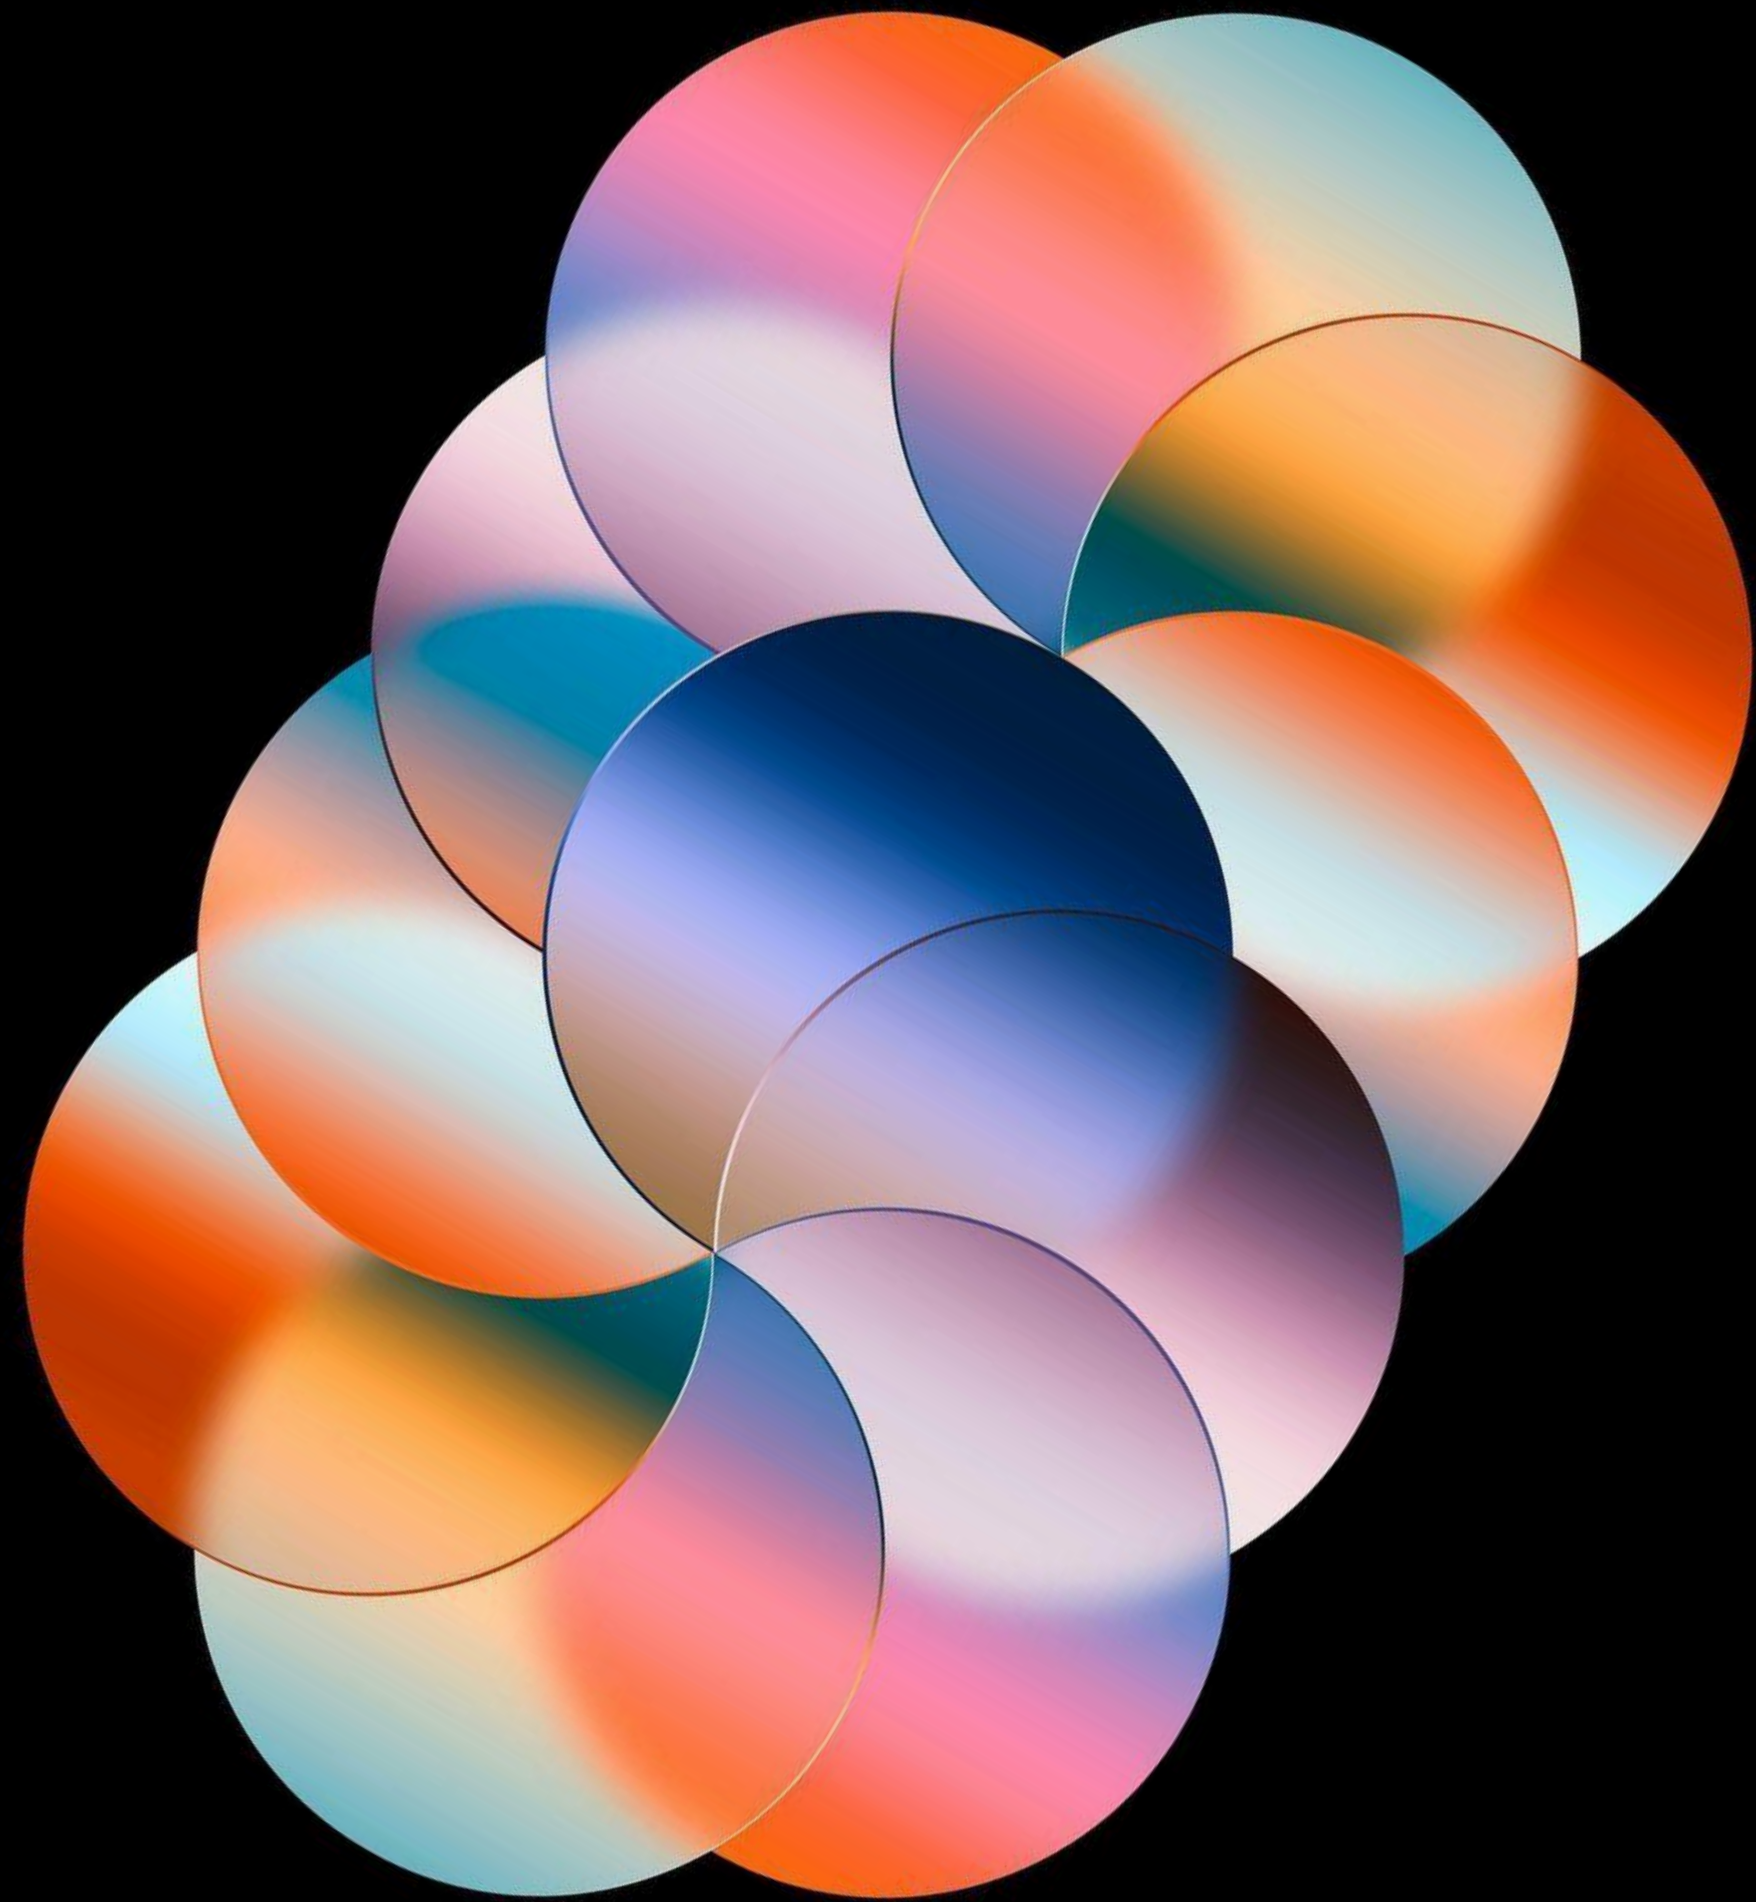

Basket value	OTIF	Share of shelf	Forecast accuracy
--------------	------	----------------	-------------------

BUSINESS · MEASURED IMPACT

EXECUTIVE TAKEAWAY

One connected core, baselined on shared KPIs, is what turns capability into double-digit business impact

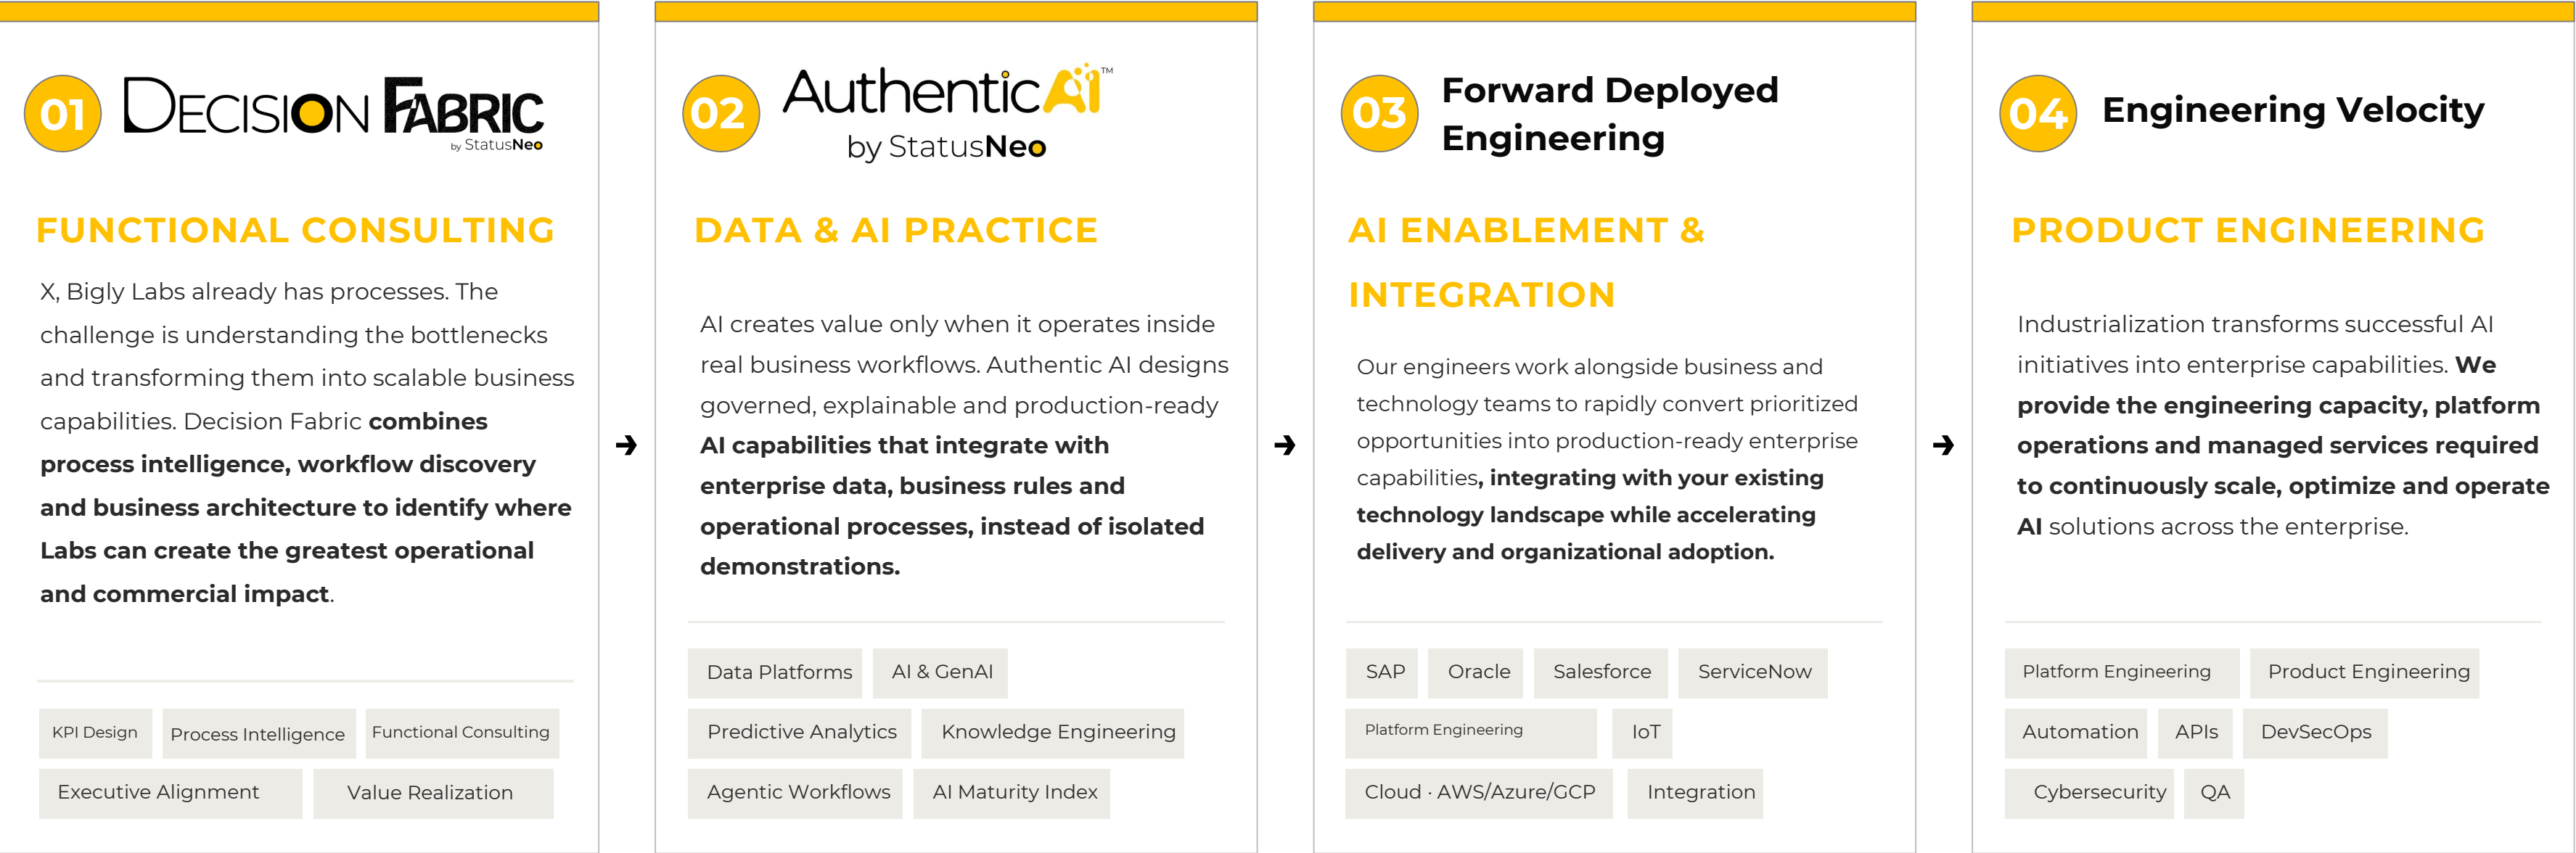

StatusNeo

A Joint Operating Model
**FOR SUSTAINABLE
FOUNDATION AND IMPACT**

A clear partnership path - one connected practice, consulted and engineered as one from KPI Trees to Engineering

EXECUTIVE TAKEAWAY

StatusNeo combines business consulting and engineering to continuously transform enterprise decisions into industrialized capabilities on X, Bigly Labs.

StatusNeo sets Customer Cube Layer development as a foundation for other applications and use-cases

01 DECISION DRIVEN REPORTING

- **Executive reporting** - one governed customer view
- **Commercial reviews** - standardised vendor packs
- **Store decision feed** - signals sent to managers

02 SELF-SERVICE ANALYTICS

- **Executive self-serve** - on-demand governed answers
- **Category self-serve** - reusable metrics library

03 FRONTLINE DECISION SUPPORT

- **Real-time NBA** - alerts at point of sale
- **Regional visibility** - live conversion data
- **Executive oversight** - real-time frontline view

WE INTEND TO BEGIN HERE

CUSTOMER CUBE LAYER

- Most contained scope
- Clearest starting point
- Foundation to other paths

The data is already live. Our work is the model around it.

EXECUTIVE TAKEAWAY

Same Customer Cube, three domains – we start where it proves value fastest: Decision Driven Reporting.

Team Structure and roles StatusNeo proposes to X, Bigly Labs

2 Functional Consultants

Working with sales and finance teams
→ to define what "customer" means across systems, so **the Customer Cube view stayed accurate and consistent.**

Translated business questions (like promo effectiveness or forecast gaps) into the logic behind the **decision-intelligence dashboards.**

Cross-Func. Data Architect / Data Engineer

→ **Assigning our existing team on this project**

Working on governed,
→ explainable, production-ready golden layer for customer cube

Helping design and implement
→ the application layer post customer cube initiative.

2 FDEs embedded within X, Bigly Labs

Building, training and ship foundational models inside the live X,
→ Bigly Labs environment, including RAG pipelines, eval harness and other advanced techniques.

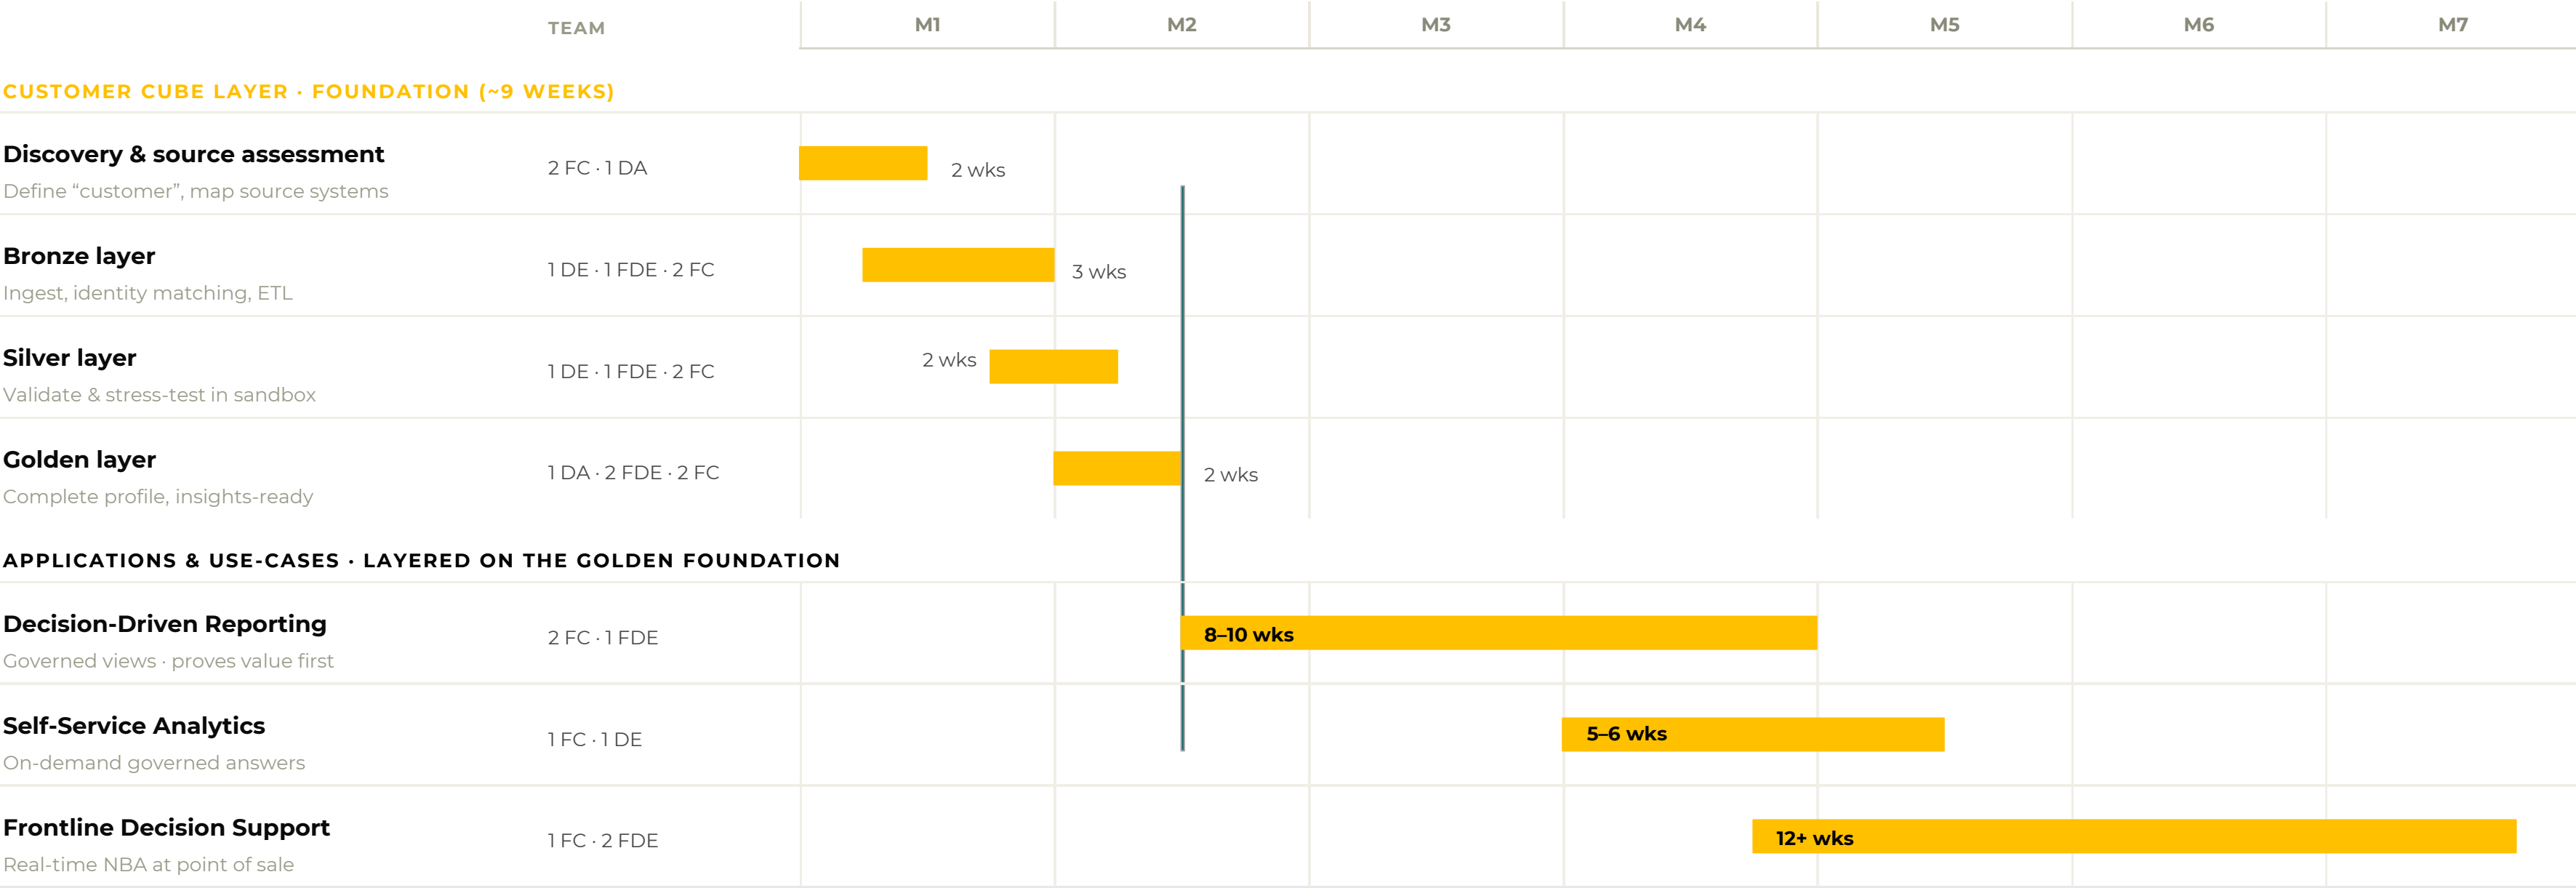

Identifying where AI can be a
→ stepping-stone for each initiative

EXECUTIVE TAKEAWAY

X, Bigly Labs owns strategy and platform leadership, StatusNeo helps Architect the solution, design the KPI Trees for each use-case, extend the execution capacity and realise the value from the initiative.

We build the Customer Cube foundation first, then layer three use-cases onto it - live in roughly seven months

Start with the Customer Cube use-case: cross-utilise the data team already deployed, add **2 FTEs** and **2 Decision Fabric consultants** . The Cube is delivered in four phases - discovery, Bronze, Silver, Golden - before the application tracks begin.

FC Functional Consultant · DA Data Architect · DE Data Engineer · FDE Forward Deployed Engineer

Team of **8** at peak · +2 FTE & +2 Decision Fabric consultants added · Data Architect & Engineer cross-utilised

PROPOSED NEXT STEPS

Executive Strategy Workshop

Align on priorities, capability vision, success criteria

Joint Opportunity Discovery

Identify and prioritize high-value use cases

Pilot One Enterprise Capability

Co-design and validate one capability with clear milestones and path forward

StatusNeo

HELPING X, BIGLY LABS INDUSTRIALISE THE CUSTOMER DATA AT SCALE

The work ahead for X, Bigly Labs is expansion & Industrialization around the Customer Cube and building the application layer on top of it. The intelligence inside needs to be wired into the decisions where it matters.

StatusNeo is already building an application layer for Dis-Chem. We are ready to increase our resourcing and build and scale the intelligence layer that drives the long-term business impact.

We would like to hold an executive workshop to **align the point of view and secure the roadmap of execution at scale.**
